

Battery Identification Guide for Common Household Batteries

Avoiding the spark keeps people and property safe. It's also good for the planet as trashed batteries can increase the risk for fires, leak potentially hazardous materials into the waste stream and increase the need to mine for virgin materials. Be battery safety smart by individually bagging or taping all used batteries before dropping at a convenient Call2Recycle[®] drop-off site.

Ni-MH

Type: Rechargeable Name on battery: Ni-MH Seal color: Orange

Nickel-Metal Hydride

Performs well in high drain devices and can be recharged up to 1,000 times.

Products that may use or contain Nickel-Metal Hydride batteries:

Ni-Cd

Type: Rechargeable Name on battery: Ni-Cd Seal color: Green

Nickel Cadmium

Can be recharged up to 1,000 times and contains Cadmium, which can be toxic to the environment and should be recycled.

Products that may use or contain Nickel Cadmium batteries:

SSLA/Pb

Type: Rechargeable Name on battery: SSLA/Pb Seal color: Gray

Small Sealed Lead Acid

Simple to manufacture and have one of the lowest discharge rates of any rechargeable battery.

Products that may use or contain Small Sealed Lead Acid batteries:

Battery Identification Guide

for Common Household Batteries

Type: Rechargeable Name on battery: Li-Ion Seal color: Blue

Lithium Ion

Has excellent performance in high drain devices, though it can be considered expensive.

Products that may use or contain Lithium Ion batteries:

Primary

Type: Non-Rechargeable **Name on battery:** alkaline, lithium, zinc-air, zinc-carbon, zinc-chloride, CR/SR/LR (button batteries)

Primary/Single-Use

Primary/Single-Use batteries cannot be recharged and must be disposed of once they wear out. Alkaline, lithium, silver oxide, zinc-air, zinc-carbon, and zinc-chloride are all types of primary batteries.

Products that may use or contain primary/single-use batteries:
