EXECUTIVE SUMMARY

Weston & Sampson, on behalf of the Vermont Department of Environmental Conservation (VTDEC) performed private water supply sampling within two residential areas of Bennington, Vermont. Water supply sampling was in response to the discovery of per- and polyfluoroalkyl substances (PFAS) contamination in three private water supplies in Bennington, Vermont in 2023. The two residential areas have been designated as Area of Concern (AOC) #1, which includes Stonehedge Drive, Southshire Drive, and North Terrace Drive located in the southwestern portion of Bennington, and AOC #2, which focuses on Hickory Hill Road located in the western portion of Bennington. PFAS concentrations exceeded Vermont's Maximum Contaminant Level (MCL) in six (6) of twenty (20) private water supplies in AOC #1 and all six (6) water supplies sampled to date within AOC #2. Perfluorooctanoic acid (PFOA) was observed as the highest concentration PFAS compound observed in all samples with detections.

Extensive environmental investigations related to the presence of PFAS in drinking water wells have been conducted in North Bennington and Bennington, Vermont since 2016. The former Chemfab fabric coating facility in North Bennington has been identified as the primary source of the PFAS compounds perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS) detected in environmental media in these areas including shallow soil, shallow and bedrock water supply wells, and surface waters. Previous investigations of the extent of Chemfab related PFAS impacts did not gather data in AOC#1 or AOC#2.

Initial review of surficial conditions and current uses in the area surrounding AOC #1 did not identify other potential PFAS sources apart from potential aerial deposition related to the former Chemfab operations.

The Burgess Brothers Landfill Superfund Site and the Burgess Brothers C&D Landfill appear to be potential sources of PFAS contamination observed in the AOC #2 water supplies. The Burgess Brothers Sites are located approximately ¾-mile east of Hickory Hill Road and PFAS, specifically PFOA and perfluorooctanoic acid (PFHpA), have been detected at elevated levels in groundwater at both Burgess Brothers Sites and influent of the Superfund Site water treatment system designed to remediate chlorinated solvents in groundwater.

Based on the findings of recent water supply sampling, the following is recommended:

- All previously sampled private water supplies should be resampled.
- Sampling should be expanded to additional private water supplies.
- Three public water supplies near AOC #1 should be sampled.
- Review files related to the Burgess Brothers Landfill Superfund site and Burgess Brother C&D Landfill to determine appropriate next steps in evaluating these properties as potential sources of PFAS to AOC #2.
- Additional research into past property uses in the AOC #1 area should be performed to identify any potential PFAS sources in the area.

1.0 INTRODUCTION

Weston & Sampson Engineers, Inc. (Weston & Sampson) on behalf of the Vermont Department of Environmental Conservation (VTDEC) has prepared this summary report detailing the investigation into per- and polyfluoroalkyl substances (PFAS) in private water supplies within two residential areas of Bennington, Vermont. A summary of drinking water supply sampling and conceptual site model (CSM) of PFAS release, fate, and transport are presented. Recommendations for additional data collection to fill data gaps are included.

1.1 Site Description

The Town of Bennington is in Bennington County, Vermont. Water supply samples were collected from two areas of concern (AOCs) based on results of previous PFAS results. AOC #1 is shown on **Figure 1a** and includes residential water supplies on Stonehedge Drive, Southshire Drive, and North Terrace Drive located in the southwestern portion of Bennington. AOC #2 is shown on **Figure 1b** and includes residential water supplies on Hickory Hill Road located in the western portion of Bennington. Bennington is in the narrow Vermont Valley located between the Green Mountains to the east and the Taconic Mountains to the west.

In 2020 (the last census) Bennington had a population of approximately 8,540. The main population is centered around the village core located centrally within the Town of Bennington and the village core of North Bennington; an incorporated village located in the northwest portion of the Bennington. The Walloomsac River flows west-northwest through the northern portion of Bennington. The Bennington and North Bennington Water Departments provide water to most properties within the village centers. However, there are several areas on the periphery of and outside village centers served by individual shallow dug or drilled bedrock water supply wells. The service area of the Bennington Water Department is shown on **Figure 2**.

Residences within AOC #1 and AOC #2 are primarily served by individual soil based on-site septic systems. The Bennington municipal sanitary sewer service area relative to AOCs is shown on **Figures 1a, 1b, and 2**.

1.2 Site Investigation Activities

The VTDEC requested PFAS analysis of private water supplies in the two AOCs following recent discovery of PFAS concentrations at or above the Vermont drinking water Maximum Contaminant Level (MCL) in three (3) residential water supplies at 510 Southshire Drive, 14 Stonehedge Drive, and 359 Hickory Hill Road. On August 31, 2023, Weston & Sampson collected drinking water samples from nineteen (19) private water supplies within AOC #1 and five (5) private water supplies within AOC #2. One additional water supply sample in AOC #1 (116 North Terrace Drive) was collected on September 13, 2023.

Extensive environmental investigations related to the presence of PFAS in drinking water wells have been conducted in Bennington, Vermont, and surrounding communities since 2016. The former Chemfab fabric coating facility in North Bennington has been identified as a primary source of the PFAS compounds perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS) releases to the environment. Expansion of the Bennington public drinking water system began in 2016 due to the

widespread PFAS contamination in private drinking water supplies. To date, public water supply service has been extended to several hundred residences and businesses. Point of entry treatment (POET) systems have been installed and/or bottled water supplied to other impacted properties where water line extension is not feasible. The impacted properties listed above and other private water supplies within AOC #1 and AOC #2 were not previously assessed as part of the Chemfab-related response actions.

1.3 Contaminants of Concern

The contaminants of concern in the AOCs are PFAS, primarily PFOA and PFOS. PFAS are class of fluorochemicals manufactured for their unique chemical stability and surface-tension lowering properties. Following several decades of commercial use, PFAS have been discovered to be globally distributed, persistent environmental contaminants. Evidence of in vivo toxicity, and the occurrence of PFAS in the blood of general populations, has created public health concern.

PFOA was used to manufacture products that resist heat and chemical reactions, and repel oil, stains, grease, and water. PFAS are used as an aqueous dispersant agent for Gore-Tex®, Teflon® and stain resistant coating of materials. PFOS was a primary component of aqueous film forming foams (AFFF) used in firefighting and as odor suppressants. The carbon fluoride bonds in these compounds are the strongest in nature. As such, PFAS are extremely resistant to chemical and biologic degradation. PFAS are also formed through the abiotic and biotic degradation of fluorotelomer alcohols.

PFOA and PFOS are solids which are extremely water soluble. They bond weakly with organic carbon. Adsorption to clay and iron minerals of the soil skeleton is reported at suitable pH. Overall, the PFAS sorption capacity of non-carbon rich soils are minimal. Our experience indicates that soils reporting non-detectable concentrations of PFAS via standard isotope dilution analyses routinely yield Synthetic Precipitation Leaching Procedure (SPLP) extract concentrations of PFAS above Vermont's Maximum Contaminant Level (MCL) of the 20 parts per trillion (ppt) for the sum of five regulated PFAS, including PFOA, PFOS, perfluorohexane sulfonic acid (PFHxS), perfluoroheptanoic acid (PFHpA), and perfluorononanoic acid (PFNA).

For fate and transport in the environment analyses, the majority of fully fluorinated PFAS including PFOS and PFOA are considered to be completely stable and flow unimpeded with advective groundwater flow. This resiliency has led to the presence of PFAS throughout water globally.

PFOA and PFOS are considered potential carcinogens and bioaccumulate in the blood serum of humans. Inhalation of dusts and ingestion of contaminated water and food are the primary exposure routes to humans. Accumulation in the liver, kidneys, and blood serum occur. Increased incidents of testicular and bladder cancers are also reported. After ceasing exposure, the PFAS are slowly excreted without being degraded.

2.0 WATER SUPPLY WELL DATA PRESENTATION

2.1 Drinking Water Supply Well Quality Data

2.1.1 Sample Collection Methods

Drinking water samples were collected by running a tap, typically the kitchen sink, for a minimum of ten minutes prior to filling sample containers from a location prior to any water treatment, typically the pressure tank spigot.

The details of the residence location, owner contact information, sampling times, materials inventory and use in the sampling area, well construction details (if available), global positioning system (gps) location of the well, and water treatment system details were entered into a digital data collection form on a tablet for downloading into a database.

Blind field duplicates were collected from 14 Stonehedge Drive and 21 Stonehedge Drive by filling additional sample containers. One field blank was collected on August 31, 2023.

All samples were submitted to Alpha Analytical of Mansfield, Massachusetts (Alpha) for PFAS analysis by EPA Method 533.

Private Water Supply Samples – AOC #1

186 HICKORY HILL ROAD	221 HICKORY HILL ROAD	254 HICKORY HILL ROAD	294 HICKORY HILL ROAD	295 HICKORY HILL ROAD

2.1.2 Water Quality Results

A summary of all PFAS results for each 911 address sampled is included as **Table 1**. This table presents the summed reported concentrations of the five compounds regulated in Vermont drinking water. Laboratory reports and tabulated data have been presented to the VTDEC previously as the data was received. The laboratory reports are included as **Appendix A**. Digitally collected field sampling data including residence owner contact information have been compiled with the laboratory results into an Excel spreadsheet included as **Table 2**.

The sum concentration of PFOA, PFOS, PFHxS, PFHpA, and PFNA (VT5) exceed 20 ppt at six (6) residences in AOC #1 and all five (5) residences sampled at AOC #2. The maximum concentrations reported in AOC #1 was approximately 54 ppt (17 Stonehedge Drive). The water supply for 359 Hickory Hill Road was sampled on July 27, 2023, by VTDEC and contained 41.7 ppt of the VT5 PFAS. Concentrations between the detection limit and 20 ppt are reported at ten (10) locations in AOC #1. Non-detect readings were reported at three (3) AOC #1 sample locations.

Multivariate plots for each AOC and individual water supplies are provided as **Appendix B** and include the eight most commonly detected PFAS compounds including:

- Perfluorobutanoic acid (PFBA)
- Perfluorobutanesulfonic acid (PFBS)
- Perfluoropentanoic Acid (PFPeA)
- Perfluorohexanoic acid (PFHxA)
- PFHxS
- PFHpA
- PFOA
- PFOS

The dominant PFAS quantified in all water supplies is PFOA. 17 Stonehedge Drive water had more variability in PFAS compounds relative to other AOC #1 water supplies with relatively higher concentrations of PFBA, PFPeA, PFHxA, and PFHpA observed compared to other water supplies. AOC #2 wells generally contained low concentrations of all the PFAS compounds listed above, except for PFOS, which was not detected in two of the wells (186 and 221 Hickory Hill Road). PFOS is reported at six (6) locations at concentrations ranging from approximately 2 ppt (466 Southshire Drive) to 7.5 (510 Southshire Drive) in AOC #1 and at three locations in AOC #2 ranging from 2.06 ppt (254 Hickory Hill Road) to 11 ppt (295 Hickory Hill Road). PFHpA is reported in five locations in AOC #1 and all five AOC #2 locations at concentrations of 6 ppt or less. PFHxS was non detect for all AOC #1 locations but was detected in four of six AOC #2 locations. PFNA was non detect in all locations in both AOCs.

The VTDEC provided a water supply result collected on June 31, 2023, from 1253 Morgan Street that contained 16.85 ppt of the VT5 PFAS. While not within either AOC, this result is shown on Figure 2 and included in Table 1.

The areal distribution of the sum of the five regulated PFAS concentrations in all water supply wells sampled are shown on **Figures 1a and 1b**. Exceedances of the MCL were generally observed in the northwest portion of AOC #1 on Stonehedge Drive and one location on the north end of Southshire Drive, which is in proximity to Stonehedge Drive. The maximum concentrations reported in AOC #2 was approximately 53 ppt (295 Hickory Hill Road).

2.1.3 Quality Assurance and Quality Control Results

A summary of QA/QC sample analysis results and comparison to the primary samples at each location is included in **Table 1**. The relative percent difference (%RPD) has been calculated for each of the primary-duplicate sample pairs. The %RPD is a measure of the precision of reproducibility of sampling and analysis technique. Acceptable %RPD for water is <30%. The %RPD for parent-duplicate sample

Bennington PFAS Summary Report

pairs for PFAS compounds detected above reporting limits were all within the acceptance criteria except for PFOS in the parent-duplicate sample pair collected from 14 Stonehedge Drive. This sample reported an RPD of 40%. This is likely due to the presence of PFOS at low concentrations close to the method detection limit in the sample pair. The PFAS data collected is suitably precise to support the conclusion of this report.

No PFAS compounds were detected at concentrations above laboratory reporting limits in the field blank sample.

\wse03.local\WSE\Projects\VT\VTDEC MASTER CONTRACT 2023\Bennington PFAS\2. Deliverables\2023_09 Water Supply Results\Report Parts\Bennington PFAS Report.docx

3.0 CONCEPTUAL SITE MODEL

The following conceptual site model (CSM) has been developed for Bennington AOC #1 and AOC #2 to present our understanding of potential source(s), release mechanisms and processes controlling the fate and transport of the PFAS identified to date. The CSM incorporates information collected from numerous sources regarding the geology, hydrogeology, geomorphologic history, and PFAS use and presence throughout the area of interest. Sources for the information utilized to develop the CSM are included in the Section 6. In addition to these specific sources, we have utilized our experiential knowledge developed over more than 30 years of investigating contaminated sites in New England and our direct experience with PFAS sites in southwestern Vermont and Massachusetts.

3.1 Surficial Geology

Surficial materials in Bennington are primarily deposited by glacial processes and more recent fluvial processes. Further description of each AOC is provided below and based on the Surficial Geologic Map of Vermont (Stewart and McClintock, 1970). Surficial materials were likely reworked and engineered fills imported as residential development occurred. Surficial materials in AOC #1 are mapped as bedrock exposures and till mantling bedrock. Surficial materials in AOC #2 are mapped as glacial outwash deposits further described as horizontally bedded glaciofluvial gravel that may include postglacial alluvium.

3.2 Bedrock Geology

According to the Bedrock Geologic Map of Vermont (Ratcliffe, 2011), bedrock underlying the Stonehedge Drive area of AOC #1 is mapped as the Lower Ordovician-aged Shelburne Marble locally containing dolostone beds. Bedrock underlying Southshire Drive and North Terrace Drive portion of AOC#1 is mapped as a dolostone member of the Clarendon Springs Formation, an Upper-Cambrian aged dolostone containing quartz knots. Several dolostone bedrock outcrops were observed throughout AOC #1 during sampling activities.

Bedrock underlying AOC #2 is primarily mapped as the Cambrian-aged Dunham Dolostone. In the western extent of AOC #2 is mapped as the Middle Cambrian-aged sandstone (Monkton Quartzite) containing dolostone beds. No bedrock outcrops were observed during water supply sampling on August 31, 2023.

Regionally, bedrock has been faulted and folded by structural events, primarily during the Taconic and Acadian Orogenies. A preliminary bedrock Geologic Map of the Bennington Area was developed by the Vermont Geological Survey (Kim, 2017). While this map does not extend to either AOC, the occurrence of thrust faults, lineations, and folding structures illustrates the complex structural setting of the region which likely extends into each of the current AOCs.

3.3 Hydrology

Groundwater flow in bedrock is primarily through and controlled by secondary porosity features including fractures and voids that are formed by the dissolution of carbonate minerals common to the marble and dolostone underlying much of the study area. All the private water supplies sampled to date are drilled bedrock wells. Barr (2017) inferred regional groundwater flow directions in bedrock material towards the Walloomsac River. Locally, groundwater flow in bedrock and unconsolidated deposits was inferred towards smaller tributaries of the Walloomsac River. In AOC #1, groundwater discharge from

the unconsolidated and bedrock aquifers is likely to Jewett Brook, located approximately 1/4-mile east of Southshire Drive. In AOC #2, groundwater may discharge from bedrock and unconsolidated aquifers to Barney Brook, which adjoins residential properties on the south side of Hickory Hill Road.

3.4 Potential Contaminant Sources and Release Mechanisms

Previous environmental investigations related to two former Chemfab facilities in Bennington and North Bennington have identified numerous potential PFAS contaminant sources in the area. Chemfab applied polytetrafluoroethylene (PTFE) coatings to fiberglass fabrics, which likely resulted in emissions of PFOA from the facilities' stacks. Area-wide sampling of drinking water supplies in 2016 identified PFAS above regulatory criteria in over 330 wells, primarily residential water supplies, within Bennington, North Bennington, and Shaftsbury. Response actions have included installation of point-of-entry treatment systems, extensions of the municipal waterline, and area-wide groundwater reclassification to Class IV.

Other potential PFAS sources previously identified that may have impacted drinking water supplies in Bennington, North Bennington and Shaftsbury include the Bennington landfill and Kocher Drive landfill, wastewater treatment plant sludge disposal areas, and numerous industrial users (Barr, 2017). Bennington and Kocher Drive landfills are both located north of Walloomsac River and are expected to be hydraulically isolated from both AOCs. Both AOCs are residential, and the historical land application of wastewater treatment plant sludge is unlikely. Industrial sites listed by Barr as potential PFAS sources are generally located in areas not expected to be hydraulically connected to either AOC based on their distance and inferred direction of groundwater flow. However, air emissions from other industrial uses could have contributed to PFAS groundwater contamination in the AOCs.

The Burgess Brothers Landfill Superfund Site is located approximately 3/4-mile east of AOC#2 (Figure 2). The landfill is approximately 12-acres that operated as a gravel quarry in the 1940s and began operating as a metal salvage and disposal facility by the early 1950s. The site accepted metals, sludge, small appliances, military specialty batteries, and newspaper and building demolition debris. Two unlined lagoons received liquid wastes and sludge from approximately 1967 to 1976. Liquid and sludge waste reportedly consisted of lead sludge, lead-contaminated wastewater, spent solvents, and battery wastes. Waste disposal practices were terminated by the State of Vermont in 1976. Landfill operations resulted in the release of chlorinated volatile organic compounds (VOCs), methylene chloride, benzene, and several metals to the environment (EPA, 2020). Groundwater samples collected at the landfill in 2016 identified PFAS in four (4) groundwater monitoring wells at concentrations up to 64 ppt. Two influent samples collected from the groundwater treatment system contained approximately 58 ppt and 52 ppt for the sum of PFOA and PFHpA. Based on the wastes accepted at the landfill and occurrence of PFAS in groundwater, the Burgess Brothers Landfill Superfund Site is a potential source of PFAS contamination in AOC #2 water supplies.

The Burgess Brothers Construction & Demolition Debris Landfills (the C&D Landfills) are located approximately 0.9-miles southeast of Hickory Hill Road. The C&D Landfills are comprised of the Phase I Landfill, which was closed and capped in 2006, and the Phase II Landfill, which reportedly opened in 2007 but is no longer active (WHEM, 2022). The operational history and types of debris accepted at this site were not described in the Vermont Solid Waste Management Program (SWMP) files readily available for review. However, the occurrence of elevated PFAS concentrations in groundwater indicate that wastes accepted at the C&D Landfills likely included PFAS-containing materials. Specifically, the sum of the VT5 PFAS have been detected in groundwater located downgradient of the Phase I Landfill at

concentrations ranging between 113 ppt and 1,737 ppt. PFOA appears to be the primary PFAS compound associated with the C&D Landfills, however, groundwater samples also contained significant concentrations of PFOS, PFHxS, PFHpA, PFNA, perfluorobutanoic acid (PFBA), and perfluoropentanoic acid (PFPeA). Multi-variate plots for four C&D Landfill monitoring wells are provided in Appendix B. Groundwater samples associated with the Phase II Landfill and surface water samples collected from Barney Brook have not been analyzed for PFAS. Based on proximity to AOC #2, PFAS concentrations and similarity of PFAS compounds between the C&D Landfills and AOC #2, the C&D Landfills are potential sources of PFAS contamination in AOC #2 water supplies.

3.5 Summary of PFAS Fate and Transport

The PFAS present at both AOC #1 and AOC #2 appear to be dominated by PFOA. For both AOCs, PFOA may have been released to the environment as air emissions from PTFE coating operations at the former Bennington Chemfab facilities. Following deposition, PFAS in surface soil was likely transported vertically downward to groundwater by infiltrating precipitation with little to no retardation or sorption to soil. In AOC #2, discharge of landfill leachate may be a continuing source of PFOA to groundwater. It is unlikely that the groundwater treatment system at the Burgess Brothers Landfill is preventing all PFAS contaminated groundwater and/or leachate from migrating off-site. The extent of PFAS contaminated groundwater associated with the C&D Landfills has not been defined. Once they enter groundwater, PFAS contaminants flow advectively with groundwater. The pathway from the overburden aquifers, if present, and the bedrock aquifers in each AOC are not adequately understood to determine the source or migration pathways of PFAS.

4.0 CONCLUSIONS AND RECOMMENDATIONS

The following conclusions are based upon our current understanding of the PFAS water supply sampling recently and previously conducted in Bennington, Vermont:

- 1) Six (6) water supplies in each AOC have PFAS concentrations exceeding Vermont's MCL for the VT5 regulated PFAS. PFOA is the primary PFAS that occurs in both AOCs.
- 2) Several PFAS sources have previously been identified in Bennington that have resulted in widespread PFAS contamination of water supplies, primarily by PFOA. The primary source of PFAS in AOC #1 water supplies is likely aerial deposition via stack emissions from the former Chemfab facilities. No new or previously identified potential sources are known in this residential area of town. In addition to stack emissions, the discharge of PFAS contaminated leachate from the Burgess Brothers Landfill and potentially the Burgess Brothers C&D Landfill are potential contaminant sources in AOC #2. However, there is not adequate data to confidently identify sources of PFAS in either AOC.
- 3) The extent of PFAS contamination in private water supplies in both AOCs are unknown. The Bennington public water system serves the area north of AOC #1 and many of the residences surrounding AOC #2.

Based on these conclusions, we make the following recommendations:

- 1) All twenty-six (26) private water supplies should be resampled to confirm PFAS results and evaluate temporal trends in PFAS concentrations.
- 2) The presence of private water supplies should be confirmed at the E911 addresses listed below for each AOC. If water supplies are present, samples should be collected from each for PFAS analysis.

- 3) We recommend sampling the following public water systems, which PFAS data was not available for:
 - a. VT0004550: Starlight Inn
 - b. VT0004479: South Gate Motel
 - c. VT0004307: Fife N Drum Motel
 - d. VT0005741: Gore Road MHP
- 4) We recommend reviewing Burgess Brothers Landfill Superfund site and Burgess Brother C&D Landfill files to identify PFAS-containing waste streams potentially accepted at the landfills, further evaluate PFAS data not available at the time this report was drafted and identify data gaps associated with PFAS fate and transport from the landfills.
- 5) Additional sources of historical development related documentation should be reviewed to assist in identification of potential PFAS sources in each AOC. Orthographic photographs, lists records, historical society records, and Mannings telephone indexes.

5.0 LIMITATIONS

This PFAS Summary Report was prepared exclusively for the use of the Vermont Department of Environmental Conservation. The conclusions provided by Weston & Sampson in this report are based solely on the information reported in this document. Future investigations, and/or information that were not available to Weston & Sampson at the time of this investigation may result in a modification of the conclusions stated in this report.

Should additional information become available concerning the areas of concern or nearby properties that could directly impact the areas of concern in the future; that information should be made available to Weston & Sampson for review so, if necessary, conclusions presented in this report may be modified. The conclusions of this report are based on area of concern conditions observed by Weston & Sampson personnel at the time of the investigation, information provided by the users and information provided by federal, state, and local agencies. This report has been prepared in general accordance with accepted engineering and environmental assessment practices. No other warranty, expressed or implied, is made.

NOTES:
 VT MCL = Vermont Water Supply Rule Maximum Contaminant Levels (Water Supply Rule, March 17, 2020)
 PFAS VT 5 (total) = sum of PFHxS, PFHpA, PPNA, PFOS, PFOA
 -- No comparison because analytes were not detected above laboratory reporting limit
 ng/L = nanograms per liter
 U = undetectable at laboratory reporting limit
 Y = calculated value
 E = result exceeded calibration range
 J = estimated value less than reporting limit, but greater than the method detection limit
 Blank Cell = No Analyte
Bold Concentration above laboratory detection limit
Bold Exceeded of VT MCL

Lab Number: L2351548
Report Date: 10/05/23

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

October 05, 2023: All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Perfluorinated Alkyl Acids by EPA 533

WG1826263-1R: The sample was re-analyzed due to QC failures in the original analysis. The results of the re-analysis are reported.

The WG1826263-3 MS recovery, performed on L2351548-01, is outside the acceptance criteria for perfluoroctanoic acid (pfoa) (197%).

WG1826263-3: The Matrix Spike level is at the Reporting Limit (RL); any detections below the RL in the native sample are not included in the % Recovery calculation.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Perfluoro-4-Methoxybutanoic Acid	PFMBA	863090-89-5
Nonafluoro-3,6-Dioxaheptanoic Acid	NFDHA	151772-58-6

Project Name: BENNINGTON PFAS
Project Number: ENG23-2810

Serial_No:10052316:32
Lab Number: L2351548
Report Date: 10/05/23

PFAS PARAMETER SUMMARY

Parameter	Acronym	CAS Number
FLUOROTELOMER CARBOXYLIC ACIDS (FTCAs)		
3-Perfluoroheptyl Propanoic Acid	7:3FTCA	812-70-4
2H,2H,3H,3H-Perfluorooctanoic Acid	5:3FTCA	914637-49-3
3-Perfluoropropyl Propanoic Acid	3:3FTCA	356-02-5

Project Name: BENNINGTON PFAS
Project Number: ENG23-2810

Lab Number: L2351548
Report Date: 10/05/23

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
	Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: BENNINGTON PFAS
Project Number: ENG23-2810

Lab Number: L2351548
Report Date: 10/05/23

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name: BENNINGTON PFAS

Lab Number: L2351548
Report Date: 10/05/23

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625.1: alpha-Terpineol

EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; SM4500NO3-F: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**

EPA 524.2: THMs and VOCs; EPA 504.1: EDB, DBCP.

Microbiology: SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.

Non-Potable Water

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

October 05, 2023: All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
	Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: VTDEC-BENNINGTON
Project Number: ENG23-2810

Lab Number: L2354136
Report Date: 10/05/23

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name: VTDEC-BENNINGTON
Project Number: ENG23-2810

Lab Number: L2354136
Report Date: 10/05/23

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: DU Report with 'J' Qualifiers

Project Name: VTDEC-BENNINGTON
Project Number: ENG23-2810

Lab Number: L2354136
Report Date: 10/05/23

- 136 Determination of Per- and Polyfluoroalkyl Substances in Drinking Water by Isotope Dilution Anion Exchange Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS). EPA Method 533, EPA Document 815-B-19-020, November 2019.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625.1: alpha-Terpineol

EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; SM4500NO3-F: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**

EPA 524.2: THMs and VOCs; EPA 504.1: EDB, DBCP.

Microbiology: SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D.

Non-Potable Water
