New Federal US EPA Regulations for Wood-Fired Hydronic Heaters and Forced-Air Furnaces

Summary

On February 3, 2015, the U.S. Environmental Protection Agency (EPA) signed the new federal regulation 40 CFR Part 60, Subpart QQQQ, Standards of Performance for New Hydronic Heaters and Forced-Air Furnaces.

Effective date of this regulation: May 15, 2015

The rule affects devices designed to burn wood or wood pellet fuel:

- Wood-fired Hydronic Heaters:
  - Outdoor Wood Boilers
  - Indoor Wood Boilers
- Wood-fired Forced-Air Furnaces

The rule includes:

- Requirements for
  - manufacturers of hydronic heaters and forced-air furnaces,
  - quality of wood pellets used as fuel,
  - sellers of all types of regulated hydronic heaters and forced-air furnaces, and
  - owners and operators of wood-fired hydronic heaters and forced-air furnaces;
- Emissions standards;
- Certification processes, test methods, and reporting requirements.

Key Requirements of the Rule Specifics:

1. Wood Burners Emission Limits
2. Permanent Labeling Requirements
3. Specific Fuel Requirements
4. Owner’s Manuals Requirements and other Point-of Sale Materials and Training
5. Procedures for Operation of Wood Burners

Important Compliance Dates and Facts

As of May 15, 2015: Wood-Fired Hydronic Heaters manufactured must meet the Particulate Matter emission limit of 0.32 lb/MMBtu heat output (weighted average), with a cap of 18 grams/hour for each test run.

Forced-Air Furnaces must meet work practices and operational standards of the regulation.

After December 31, 2015: retailers may not sell any wood-fired hydronic heaters, such as outdoor wood boilers and indoor wood boilers, that do not meet the Particulate Matter emissions limit of 0.32 lb/MMBtu heat output (weighted average) with a cap of 18 grams/hour for each test run.

As of May 16, 2016: Small Forced Air Furnaces (< 65,000 Btu/hour heat output) must meet the Particulate Matter emission limit of 0.93 lb/MMBtu heat output (weighted average), as specified by U.S. EPA.

As of May 15, 2017: Large Forced Air Furnaces (≥ 65,000 Btu/hour heat output) must meet the Particulate Matter emission limit of 0.93 lb/MMBtu heat output (weighted average), as specified by U.S. EPA.

As of May 15, 2020: Hydronic Heaters must meet the Particulate Matter emission limit of 0.10 lb/MMBtu heat output for each burn rate if tested using crib wood; or the alternate limit of 0.15 lb/MMBtu heat output if tested using cordwood, as specified by U.S. EPA.

Forced-Air Furnaces (all sizes) must meet the Particulate Matter emission limit of 0.15 lb/MMBtu heat output, as specified by U.S. EPA.
New Federal US EPA Regulations for Wood-Fired Hydronic Heaters and Forced-Air Furnaces

Manufacturers must provide:
- Model-specific descriptions of proper operation and best practices, included in the owner’s manuals;
- Training for distributors on proper operation and best practices for units;
- Written and video versions of proper operation and best practices information for purchasers/operators/users of the heaters.

Owners and operators must:
- Use proper burn practices for units subject to these regulations,
- Operate each unit in a manner consistent with the owner’s manual,
- Use only wood chips and pellet fuels specified in the owner’s manual; pellets must be graded under a licensing agreement with a third-party organization approved by the EPA, and
- Not burn Prohibited Fuels.

The rule requires manufacturers to void the warranties in cases of improper operation, including burning of improper fuel.

These rules DO NOT:
- Regulate heaters fueled solely by gas, oil, or coal.
- Regulate existing wood heaters that are already in use in or at people’s homes.
- Set visible emissions limits from these heaters.
- Prohibit the use of these heaters in non-heating seasons.

Prohibited Fuels
- Residential or commercial garbage;
- Lawn clippings or yard waste;
- Materials containing rubber, including tires;
- Materials containing plastic;
- Waste petroleum products;
- Paints or paint thinners;
- Asphalt products;
- Materials containing asbestos;
- Construction or demolition debris;
- Paper products, cardboard, plywood, or particleboard; *
- Railroad ties, pressure-treated wood, or pallets;
- Manure or animal remains;
- Salt water driftwood or other previously salt water saturated materials;
- Unseasoned wood (wood with a moisture content of 20% or more; or 35% or more for chip wood);
- Any materials that are not included in the warranty and owner’s manual for the subject wood heater; or
- Any materials that were not included in the certification tests for the subject wood heater.

* The regulation does not prohibit the use of fire starters made from paper, cardboard, sawdust, wax, and similar substances in an affected wood heater.
