

**Sixteenth Annual Report on the
Status of the Petroleum Cleanup Fund**

10 VSA § 1941

January, 2004

This report includes a review of Petroleum Cleanup Fund receipts and disbursements for the calendar and fiscal year 2003. An evaluation of the effectiveness of the Fund in meeting its legislative intent, and a review of the reasonableness of remediation costs is also included. This report also includes recommendations concerning aboveground storage tanks.

Prepared by: The Petroleum Cleanup Fund Advisory Committee

PETROLEUM CLEANUP FUND ADVISORY COMMITTEE MEMBERS

Jeff Wennberg: Designated representative of the Secretary,
Agency of Natural Resources

P. Howard Flanders: Designated representative of the Commissioner,
Department of Environmental Conservation (DEC)

Walt Daly: Designated representative of the Commissioner,
Department of Banking and Insurance

Joe Choquette: Vermont Petroleum Association

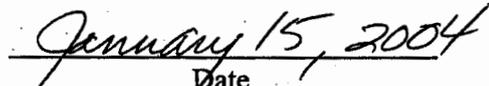

Senator Virginia Lyons

Representative Alice Nitka

Scott Bigger: Designated representative of Lowell T. Spillane,
Retail gasoline dealer

Dick Barnes: A.R. Sandri, a licensed gasoline distributor

Elizabeth McLain, Secretary
Agency of Natural Resources

Date

Petroleum Cleanup Fund Advisory Committee
Annual Report
Executive Summary

This is the sixteenth annual Petroleum Cleanup Fund (PCF) report submitted in accordance with 10 V.S.A. § 1941; it includes a review of receipts and disbursements for 2003. The report also evaluates the effectiveness of the PCF in meeting its legislative intent, reviews the reasonableness of remediation costs, and recommends statutory amendments. This report also provides recommendations to address a growing problem of heating oil releases from both aboveground and underground heating oil storage tanks, and calls for the return of funds diverted from the fund for use in other areas of state government.

For the first time since the PCF was created in 1988, the fund's balance fell below its required level of \$1 million this past July, measuring \$789,661 on July 31 and \$722,049 on August 31. Since EPA has approved use of the PCF as an acceptable mechanism for tank owners to meet financial assurance obligations as long as the fund maintains a \$1 million balance, falling below this level has placed tank owners in jeopardy of violating federal law. Beginning in September, the Agency of Natural Resources addressed the situation by suspending all loan and grant programs, prioritizing reimbursement claims and delaying reimbursements, allowing the balance to return to \$1 million. Each month since then, the department has delayed reimbursement to tank owners until sufficient funds were received through tank assessment fees and licensing fee revenue. Although this action helped to maintain the fund balance in 2003, projections for 2004 indicate that more significant delays in payments will be necessary to maintain the balance in the future. The effect of this action is to slow the rate of site cleanups, create uncertainty among tank owners and contractors, and to draw the attention of the EPA. Combined, these effects may create a new and additional risk to public health and the environment.

To address the financial condition of the PCF, the Advisory Committee has identified two priority items that will need to be implemented if the PCF is to continue to meet its legislative intent.

- Monies transferred from the PCF by the Legislature should be repaid in order to maintain fund solvency; and
- A fee on heating oil and kerosene should be authorized to account for the heating oil and kerosene cleanups that utilize the PCF.

During the 2002 legislative session, \$1,776,000 was transferred from the PCF into the state's general fund making the total general fund transfers since the fund began to \$5,501,000. The transfer of these monies has undermined the financial stability of the PCF. Future projections indicate that demands on the PCF will exceed future revenue, which will continue to threaten the PCF balance and the viability of the programs the fund supports. To restore the PCF balance, monies transferred in 2002 should be returned to the PCF in 2004, and other past transfers should be repaid over time.

The current structure of the PCF cannot support the continued reimbursement of cleanup costs from heating oil releases from both aboveground and underground heating oil storage tanks without additional revenue. The Committee recommends that a separate account within the PCF be created to address these risks, financed by a fee on heating oil and kerosene. House Bill 412 was introduced during the 2003 legislative session, which addresses this issue. The Committee recommends the passage of this bill.

Description and Purpose

This is the sixteenth annual report on the status of the PCF. This report will look at the effectiveness of the fund in meeting its intended purpose, will review the status of cleanups from motor fuel and heating oil releases from both aboveground and underground heating oil storage tanks, will review the farm and residential underground storage tank (UST) removal grant program and will provide future PCF projections and recommendations for changes to the PCF.

In 1985, the General Assembly enacted Vermont's first law to regulate the construction, maintenance and operation of underground steel tanks used for the storage of petroleum products. Act 66 of the 1985 session established standards for new construction, and set a deadline of June 30, 1998, later amended to December 22, 1998, for the removal or replacement of unprotected USTs.

In 1988 the Legislature created the PCF, and appointed this Advisory Committee to oversee the financing, effectiveness and conduct of the program and the fund which supports it. The primary purpose of the PCF is to protect public health and the environment by paying for cleanup and restoration of contaminated soil and groundwater caused by releases from underground petroleum storage tanks, and to compensate third parties for property damage and bodily injury. Many changes have been made since 1988, including the inclusion of pollution coverage for aboveground storage tanks (ASTs) and a farm and residential UST removal grant program. The Fund also provides loans to small marketers and small towns for tank replacement, and to all tank owners for upgrades to spill and overfill leak detection equipment.

The PCF provides financial assurance to UST owners, who are required by state and federal law to provide coverage for up to \$1 million for cleanup and \$1 million for third party liability. Since such affordable comprehensive insurance coverage continues to be difficult to access for tank owners, the PCF fund enables tank owners to meet their financial responsibility (FR) requirements. By law, the U.S. EPA must approve the operation and viability of a state fund before it may serve as a financial responsibility mechanism for UST owners. EPA accepted Vermont's fund as a financial assurance mechanism in 1990, with the requirement that a minimum balance of \$1 million be maintained. In 2003, the balance fell below this level, which has placed tank owners in jeopardy of violating federal law.

Revenue comes from an annual assessment fee of up to \$200 per tank on most underground tanks, and a "distributor licensing fee" of one cent per gallon of motor fuel sold in the state. Additional revenue comes from the repayment of loans, recovery of some costs from responsible parties, and interest accruing upon any cash balance in the fund.

Expenditures include the cost of cleanup, third party payments, loans to businesses and municipalities, grants to homeowners to assist in the removal of heating oil USTs and modest administrative expenses. Each uninsured cleanup undertaken in the state becomes eligible for fund assistance after the party responsible for the tank meets a certain "deductible," a co-insurance payment based on the circumstances of ownership. For commercial entities, the deductible is set at \$10,000 per occurrence. For homeowners, a deductible of \$250 must be met. Owners of commercial heating oil ASTs meet a \$1000 deductible.

In 2003, the previous deadline for filing claims against the PCF was extended to July 1, 2009, and the “sunset” date for collection of the distributor licensing fee was extended to April 1, 2011.

Risks to Fund Solvency

The PCF lacks the financial solvency to address its current obligations. Projections indicate that revenue anticipated under the current structure of the fund is inadequate to address future cost requirements. Continued demands on the PCF include cleanups at existing UST sites and the discovery of new sites. Third party claims continue to pose an uncertain risk to the PCF. Providing reimbursements to heating oil cleanups from both ASTs and USTs remains a growing risk to the PCF.

The large number of contaminated properties that are eligible for reimbursement under the Fund will continue to require significant PCF monies. Eighty-two new sites were discovered in 2003 adding to the total of nearly 2,600 sites discovered statewide since 1988. This large number of contaminated properties will result in an increase in the disbursements from the PCF as investigations and cleanups continue. A recent initiative was begun in 2003 at the request of EPA to address older sites in Vermont. Over 300 sites remain in the backlog and further PCF eligible work needs to be completed at these sites. This work will likely cause an increase in claims against the PCF. There are also 20 different sites where extensive remediation is necessary, and the DEC has committed to over \$2 million for future cleanups costs under the pay-for-performance program.

Providing reimbursements for releases at heating oil and kerosene sites remains a risk to the PCF (Attachment 4). The current financial condition of the PCF cannot support these cleanups without additional revenue. This problem is compounded by an inadequate fund balance. In 2003, the total heating oil related reimbursements included \$144,035 for UST releases, \$323,845 for AST releases and \$79,860 for the UST residential heating oil removal grant program, for a total of \$547,740 for the year. Since 1994 (the date UST heating oil tanks were added to the PCF), over \$4.5 million, or approximately 7 % of all disbursements, have been made for heating oil related activities. This added risk to the PCF cannot be sustained unless there is appropriate funding to support these activities.

There also remains the threat of a large petroleum release in a critical area. Over the history of the program, the sites that have affected public water supplies or sensitive environmental areas have required extensive remediation at a high cost to the PCF. A site discovered in 2002 in Hartland has over 30 public and private wells that have been contaminated with a gasoline additive, MTBE. This site will require a large disbursement of PCF monies to address this problem. In addition, there are 2 sites that have received reimbursements totaling more than \$1,000,000 each for remediation costs, 20 sites with cleanup costs less than \$1 million but greater than \$500,000 and 127 sites that have required cleanup costs less than \$500,000 but more than \$100,000 each. When sites like these are discovered, cleanup work can continue, at a large fund expense, for as long as 5-10 years.

Third party claims constitute an uncertain risk. Cumulative third party claims of \$2.9 million to date represent only 4.6% of the total disbursements from the Fund. However, a major release in a critical area, such as a public water supply or high density residential area, could result in a

costly third party claim. Due to the low PCF balance, public health is at a higher risk as there may not be adequate resources necessary to provide an immediate and effective response. Contaminated water supplies represent the majority of all third party claims. Future discovery of contaminated public water supplies is anticipated, since there are 41 leaking underground storage tank sites located in close proximity to public water supplies. There are an approximate 375 private wells at 125 sites serving an estimated population of over 1,000 people that have been contaminated by petroleum from leaking USTs. Attachment 5 shows the distribution of sites with a direct and immediate effect on public health and the environment over the past sixteen years. The Fund continued to provide reimbursements to municipalities where petroleum contaminated soils were encountered during public water or sewer lines projects. The added cost of properly handling the contaminated material as well as having proper personal protection for the on site workers is a third party cost eligible for reimbursement from the Fund. Each year this is an uncertain risk to the Fund.

In the 2002 legislative session, \$1,776,000 was transferred from the PCF into the state's general fund making the total general fund transfers since the fund began to \$5,501,000. The transfer of these monies has reduced the fund's balance to a point where current obligations could not be met in a reasonable timeframe. The fund is required by EPA to maintain a \$1 million reserve. Future projections indicate that demands on the PCF will exceed future revenue, reducing the balance to below the \$1 million mandated reserve. At that point the PCF will not be considered a viable FR mechanism and tank owners will be found to be in violation of state and federal law. To prevent this from occurring, monies transferred in 2002 and in the past, should be returned to the PCF, which will provide the resources necessary to mitigate the serious effects of petroleum tank releases.

Review of Receipts to the Fund

A review of fund receipts for calendar year 2003 is summarized in Attachments 1 and 6. In 2003, total fund receipts were \$4,893,952. Owners of "Category One" storage tanks paid \$364,060 in tank assessment fees. The distributor licensing fee, a one cent assessment per gallon of motor fuel sold in the state, contributed \$4,115,480, a 5.4% decrease compared to 2002. Other income includes the repayment of loans, \$366,651, and interest income of \$26,111. Lastly, cost recovery provided \$21,650 additional income to the PCF. Overall, income to the PCF remained consistent with past years.

Review of Disbursements from the Fund

A review of fund disbursements for calendar year 2003 is summarized in Attachments 1, 2 and 6. A review of fund disbursements over the history of the PCF is summarized in Attachments 8. In 2003, disbursements totaling \$5,382,933 included \$114,170 for the UST replacement loan program, \$79,860 for the residential UST removal grant program, \$4,675,068 for remedial action, \$200,000 for administrative costs, and \$313,835 for third party claims. Attachments 1 and 6 presents a tabular summary of this information.

Disbursements for remediation represented a total of 1,028 different sites (Attachment 2), which includes sites which began remediation in prior years. Two of these sites have received reimbursements totaling more than \$1 million each for remediation costs. One of these cost over \$1.2 million; however, this site involves two separate properties where releases occurred, but the

contamination is being managed as one site due to their close proximity and their effect on a public water supply. The other site also involves significant contamination to a bedrock aquifer. There are 20 different sites where extensive remediation is necessary, and the DEC has established agreements to reimburse over \$2 million for these cleanups. The cleanups for these sites are under the pay-for-performance (PFP) cleanup program. Under PFP cleanup, contractors are paid based on the effectiveness of the cleanup and not on a traditional time and materials basis. In 2003, remediation costs also included the reimbursement of \$144,035 at heating oil UST sites and \$323,845 at aboveground storage tank sites. Lastly, 80 incentive grants were issued in 2003 for the closure of residential heating oil tanks totaling \$79,860. This brings the total grants awarded since 1998 to \$353,336.

In all, 1,028 sites in 196 different towns have had investigations or cleanups that have benefited from the use of the Fund. Attachment 7 shows the distribution of these sites throughout the state.

In 2003 a total of \$114,170 in UST loans (including administrative fees) was advanced for upgrade work at 4 stations. Two loan applications each for \$40,000 are being held due to the low balance of the Fund. One tank owner has gone forward with the required work in the hope that the UST Loan Program will be funded in 2004. The loan program has seen larger repayments this year in that six "Mom & Pop" stores were sold and the balance of their UST Loan repaid before the loan term expired. This brings the total number of facilities that have taken advantage of UST replacements loans to 160 and 22 additional facilities obtaining loans to upgrade existing equipment.

Third party claims continue to represent a small portion of overall disbursements (4%). To date the PCF has paid \$2,892,656 for all third party claims, with \$313,835 in 2003 (Attachment 2).

Effectiveness of the Fund in Meeting Its Purpose

For the first time in its history, the Petroleum Cleanup Fund was unable to meet all of its obligations in 2003. Reimbursement payments to tank owners were delayed, and the UST residential grant program and the UST loan program were curtailed in 2003. The reimbursement delays resulted in slowing the pace of the site cleanups as consultants felt the need to develop new contracts which ensured their payment for services. Uncertainty of the status of the Fund also caused some responsible parties to suspend work at contaminated sites until reimbursement from the Fund was assured. Future projections show that, without the additional revenue provided by a fee on heating oil and kerosene, or return of monies borrowed by the Legislature, there will be inadequate funds to address both current and future needs.

Reasonableness of the Cost of Cleanup

The committee has reviewed the written policies and procedures of the DEC related to UST replacement, eligible costs and reimbursement procedures. In assessing the reasonableness of the cost of cleanup, the committee has reviewed national averages and comparative data from other states. The PCF Advisory Committee has concluded that agency staff responsible for this program have exercised prudent cost containment measures. A review of an annual survey conducted by the Association of State Underground Storage Tank Cleanup Funds shows that Vermont's cost of cleaning up contaminated sites is below those of other states. The continued

efforts of Agency staff have helped to maintain reasonable cleanup costs in Vermont. The implementation of Vermont's pay-for-performance cleanup agreements has also helped to control costs.

Review of Cleanups from Heating Oil Releases from ASTs and USTs

PCF coverage was made available for uninsured costs from heating oil releases from both ASTs (1998) and USTs (1994). As of the end of 2003, the PCF has provided over \$4,567,727 for these cleanups (Attachment 4). With claims on the rise for heating oil related cleanups, the 2000 Legislature requested that the PCF Advisory Committee make recommendations for future PCF coverage. Due to an increase in the number of sites where the cleanups were not covered by private insurance, and with contamination affecting public health and the environment, the Committee recommended that PCF coverage continue for these releases only if there is the establishment of a ½ cent fee on heating oil and kerosene. If no additional revenue is provided to support these activities, then the Committee recommends that heating oil related activities be removed from the PCF.

Recommended Statutory Changes to Chapter 59

1. Establish a fee on heating oil and kerosene. This can be accomplished through the passage of House Bill 412, which was introduced in the Vermont House of Representatives in 2003.

Total	41	125	154	92

For each site with an affected receptor the number of actual Vermonters exposed to contamination can vary. The actual users for public water supplies can be as low as 25 people per system to as high as many thousands of users. For sites with affected private water supplies, the number of contaminated wells depends on the specific conditions of the site. On average there are approximately three contaminated wells discovered per site, with an average of 3 users per household. However, one of the 125 sites listed above involved contamination to over 80 wells affecting approximately 240 users, and a site discovered in 2002 involves contamination to over 30 wells, including a public water supply, affecting 100s of users. Sites with surface water impacts can affect both public health and the environment. High concentrations of petroleum in a stream can cause detrimental affects to biota, and lead to an increased exposure to stream users. Lastly, sites with indoor air impacts can lead to the greatest risk to public health. Petroleum vapors entering a home can be at levels that are explosive. More often petroleum vapors reach levels that pose a serious health risk. Of the 92 sites with indoor air impacts, the number of exposed individuals varied from site to site. An average site involves three homes affected with approximately three persons per home.

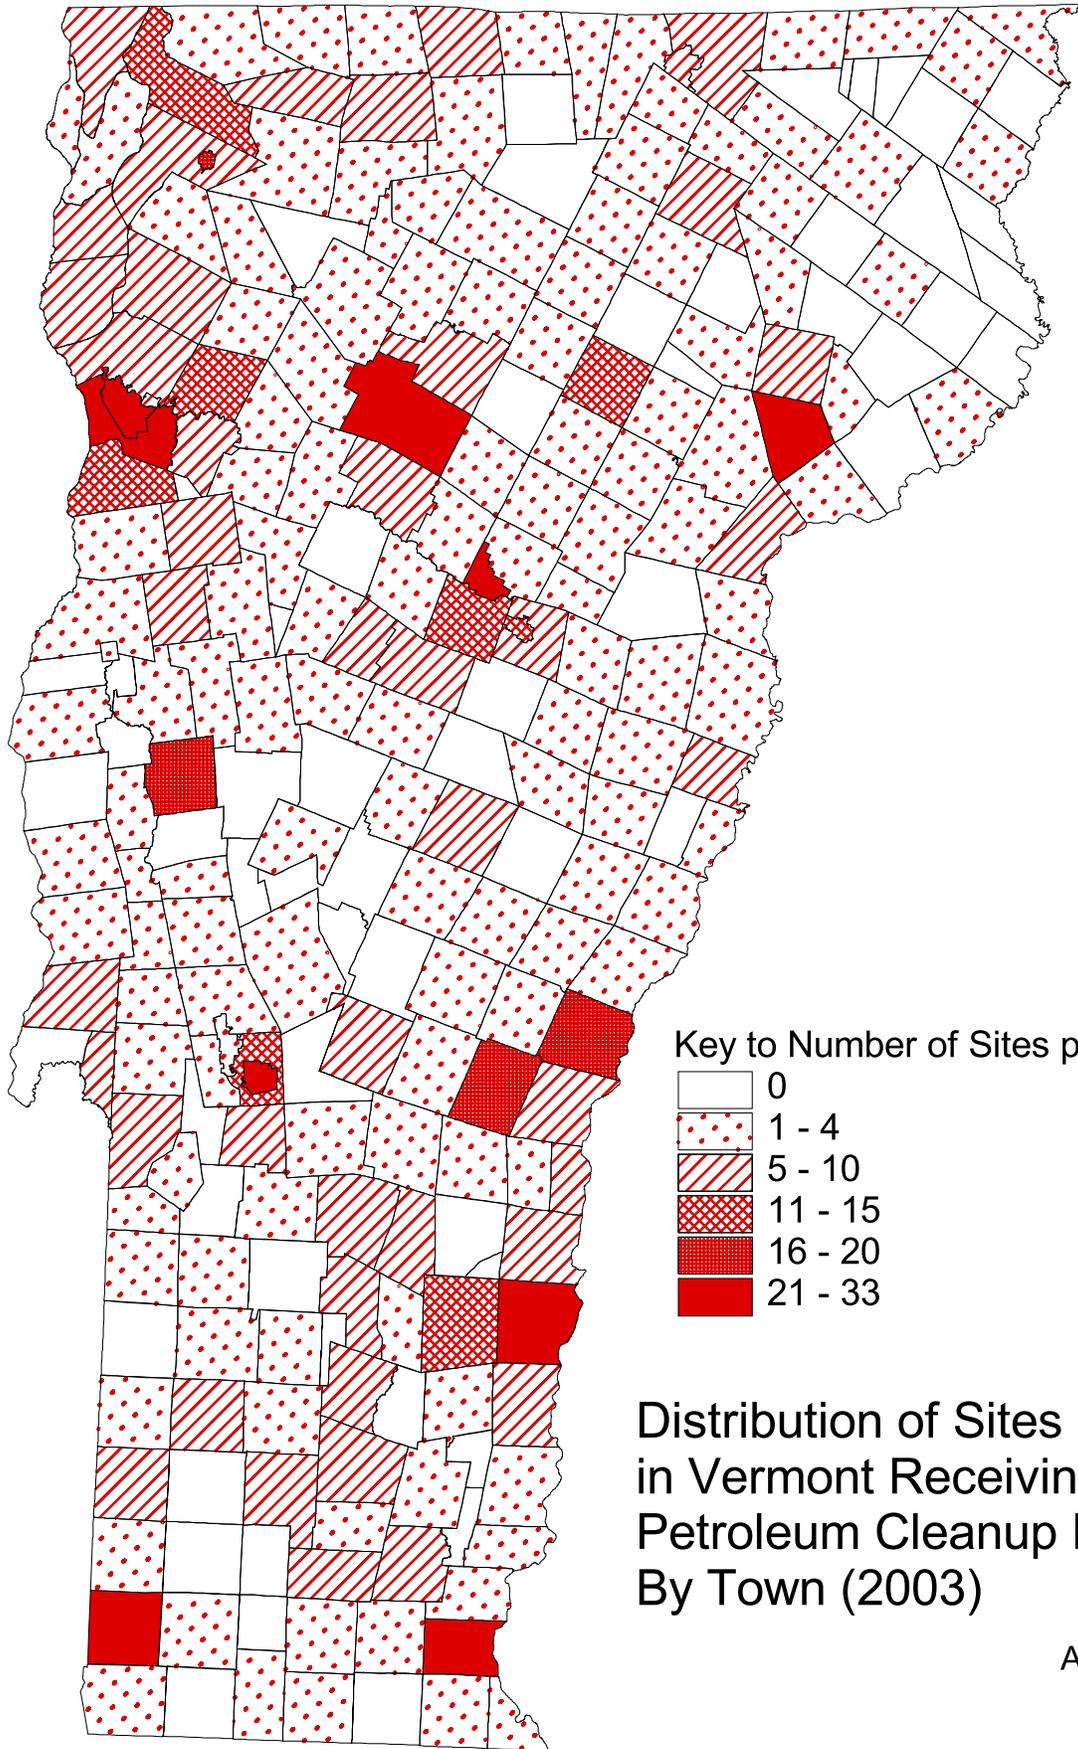

Sites that are discovered with contamination affecting a sensitive receptor requires immediate response. It is critical that the Petroleum Cleanup Fund maintain an adequate balance so that there are no delays in efforts to mitigate the serious public health and environmental presented at these sites.
