

**Seventeenth Annual Report on the
Status of the Petroleum Cleanup Fund**

10 VSA § 1941

January, 2005

This report includes a review of Petroleum Cleanup Fund receipts and disbursements for the calendar and fiscal year 2004. An evaluation of the effectiveness of the Fund in meeting its legislative intent, and a review of the reasonableness of remediation costs is also included. This report also includes recommendations concerning aboveground storage tanks.

Prepared by: The Petroleum Cleanup Fund Advisory Committee

PETROLEUM CLEANUP FUND ADVISORY COMMITTEE MEMBERS

Elizabeth McLain:	Secretary, Agency of Natural Resources
P. Howard Flanders:	Designated representative of the Commissioner, Department of Environmental Conservation (DEC)
Walt Daly:	Designated representative of the Commissioner, Department of Banking and Insurance
Joe Choquette:	Vermont Petroleum Association
Senator Virginia Lyons	
Representative Alice Nitka	
Scott Bigger:	Designated representative of Lowell T. Spillane, Retail gasoline dealer
Dick Barnes:	A.R. Sandri, a licensed gasoline distributor
Shane Sweet:	Vermont Fuel Dealers Association
Peter Bourne:	Bourne's Incorporated, a licensed fuel dealer
Beth Austin	Mill Brook Real Estate, a licensed real estate broker

Elizabeth McLain, Secretary
Agency of Natural Resources

Date

Petroleum Cleanup Fund Advisory Committee
Annual Report
Executive Summary

This is the sixteenth annual Petroleum Cleanup Fund (PCF) report submitted in accordance with 10 V.S.A. § 1941; it includes a review of receipts and disbursements for 2004. The report also evaluates the effectiveness of the PCF in meeting its legislative intent, reviews the reasonableness of remediation costs, and recommends statutory amendments. This report also summarizes the establishment of separate accounts within the PCF for motor fuel and heating oil related activities. Recent successful cost recovery cases are also described within this report. This report also addresses the legislative directive to investigate the following items: Proposed standards for the installation of aboveground heating fuel storage tanks, or other mechanisms to prevent future releases from aboveground heating fuel storage tanks; proposed financial incentives to recipients of petroleum cleanup fund monies whose aboveground heating fuel storage tanks are in compliance with industry standards (NFPA Code 31); and, the effect of pollution liability insurance exclusions on the availability of homeowners insurance, and its impact on the petroleum cleanup fund.

In 2003, the PCF balance fell below its required level of \$1 million for the first time since the fund's inception in 1988. In the 2004 Legislature, steps were taken to restore the balance to a workable level. These steps included the repayment of \$530,000 from a transfer of \$1.76M in 2002 and the establishment of a ½ cent per gallon fee on heating fuels. In addition, the state successfully recovered \$2.7M from four sites where private insurance coverage should have been provided to the tank owner. These efforts have resulted in an end-of-year available fund balance of \$2.2 million. Despite the healthy fund balance, the reimbursements of heating oil related activities have been hampered by the delayed collection of fees and increased cleanup activity. The separate motor fuel and heating fuel accounts were established effective July 1, 2004, however the first heating oil fees were not deposited into the PCF until late December 2004. With cleanups continuing throughout this period at a robust pace, the heating oil account is running a deficit. The Secretary of the Agency of Natural Resources was authorized under statute to pay the costs for this program in anticipation of the future collection of fees, but only for calendar year 2004. The farm and residential grant program for USTs continues to remain very successful, as the number of requests for grants exceeded the amount authorized for the year. In addition, grants for the replacement of ASTs also began in 2004.

The Committee remains concerned that the existing balance in the fund will be a target for a future fund transfer. The Committee strongly warns against this transfer as future projections indicate that the long-term risks will exceed PCF resources.

The PCF Advisory Committee has identified the following priority items for the PCF in 2005:

- PCF funds should not be transferred out of the fund to be used for any other governmental purpose; and
- The PCF heating oil account should be managed in a manner that does not prevent completing necessary cleanups, and administering the grant program. This should include improving the timeliness of fee collection, controlling costs and taking steps to prevent future releases.

Description and Purpose

This is the seventeenth annual report on the status of the PCF. This report will look at the effectiveness of the fund in meeting its intended purpose, will review the status of cleanups from motor fuel and heating oil releases from both aboveground and underground heating oil storage tanks, will review the farm and residential underground storage tank (UST) and aboveground (AST) grant program and will provide future PCF projections and recommendations for changes to the PCF.

In 1985, the General Assembly enacted Vermont's first law to regulate the construction, maintenance and operation of underground steel tanks used for the storage of petroleum products. Act 66 of the 1985 session established standards for new construction, and set a deadline of June 30, 1998, later amended to December 22, 1998, for the removal or replacement of unprotected USTs.

In 1988 the Legislature created the PCF, and appointed this Advisory Committee to oversee the financing, effectiveness and conduct of the program and the fund which supports it. The primary purpose of the PCF is to protect public health and the environment by paying for cleanup and restoration of contaminated soil and groundwater caused by releases from underground petroleum storage tanks, and to compensate third parties for property damage and bodily injury. Many changes have been made since 1988, including the inclusion of pollution coverage for aboveground storage tanks (ASTs) and a farm and residential UST and AST grant program. The Fund also provides loans to small marketers and small towns for tank replacement, and to all tank owners for upgrades to spill and overfill leak detection equipment.

The PCF provides financial assurance to UST owners, who are required by state and federal law to provide coverage for up to \$1 million for cleanup and \$1 million for third party liability. Since such affordable comprehensive insurance coverage continues to be difficult to access for tank owners, the PCF fund enables tank owners to meet their financial responsibility (FR) requirements. By law, the U.S. EPA must approve the operation and viability of a state fund before it may serve as a financial responsibility mechanism for UST owners. EPA accepted Vermont's fund as a financial assurance mechanism in 1990, with the requirement that a minimum balance of \$1 million be maintained.

In 2004, the Legislature created a fee on heating fuel to create a revenue source for the heating oil related activities funded under the PCF. The PCF was also divided into two separate accounts: a motor fuel account and a heating oil account, with both revenue and expenditures to be managed within each account.

Revenue for the motor fuel account comes from an annual assessment fee of up to \$200 per tank on most underground tanks, and a "distributor licensing fee" of one cent per gallon of motor fuel sold in the state. Additional revenue comes from the repayment of loans, recovery of some costs from responsible parties, and interest accruing upon any cash balance in the fund. Revenue for the heating fuel account comes a licensing fee of one-half cent per gallon of heating oil and kerosene sold in the state.

Expenditures include the cost of cleanup, third party payments, loans to businesses and municipalities, grants to homeowners to assist in the removal of heating oil USTs and modest

administrative expenses. Each uninsured cleanup undertaken in the state becomes eligible for fund assistance after the party responsible for the tank meets a certain “deductible,” a co-insurance payment based on the circumstances of ownership. For commercial entities, the deductible is set at \$10,000 per occurrence. For homeowners, a deductible of \$250 must be met. Owners of commercial heating oil ASTs meet a \$1,000 deductible.

The sunset date for collection of the motor fuel distributor licensing fee is April 1, 2011 while the sunset date for the licensing fee on heating fuels is April 1, 2008.

Risks to Fund Solvency

The PCF currently maintains a sufficient balance in the motor fuel account to address its current obligations, while the heating fuel account is inadequate to address current demands. Long range projections indicate that future revenue will not be sufficient to adequately respond to anticipated needs in both the motor fuel and heating fuel accounts. To quantify the risks on the PCF, an actuarial study will be completed in early 2005. This study will analyze the current demands on the PCF which include cleanups at existing UST and AST sites, the discovery of new sites and third party claims.

The large number of contaminated properties that are eligible for reimbursement under the Fund will continue to require significant PCF monies. One hundred and twenty one new sites were discovered in 2004 adding to the total of over 2,700 sites discovered statewide since 1988. This large number of contaminated properties will result in an increase in the disbursements from the PCF as investigations and cleanups continue. A recent initiative was begun in 2003 at the request of EPA to address older sites in Vermont. Over 1,200 sites remain in an active status where further PCF eligible work needs to be completed. This work will likely cause an increase in claims against the PCF. There are also 23 different sites where extensive remediation is necessary, and the DEC has committed over \$1.5 million for future cleanups costs under the pay-for-performance program.

Providing reimbursements for releases at heating oil and kerosene sites remains a risk to the PCF. There are inadequate funds in the heating fuel account to fully support the cleanups at these sites. In 2004, the total heating oil related reimbursements included \$418,133 for UST motor fuel releases, \$485,945 for AST heating fuel releases and \$116,502 for the UST and AST residential heating oil removal grant program, for a total of \$1,020,580 for the year. The anticipated annual revenue for this program is estimated to be \$650,000, leaving an annual net deficit of \$370,580.

There also remains the threat of a large petroleum release in a critical area. Over the history of the program, the sites that have affected public water supplies or sensitive environmental areas have required extensive remediation at a high cost to the PCF. A site discovered in 2002 in Hartland has over 30 public and private wells that have been contaminated with a gasoline additive, MTBE. This site will require a large disbursement of PCF monies to address this problem. In addition, there are 2 sites that have received reimbursements totaling more than \$1,000,000 each for remediation costs, 18 sites with cleanup costs less than \$1 million but greater than \$500,000 and 130 sites that have required cleanup costs less than \$500,000 but more than \$100,000 each. When sites like these are discovered, cleanup work can continue, at a large fund expense, for as long as 5-10 years.

Third party claims constitute an uncertain risk. Cumulative third party claims of \$2.9 million to date represent only 4% of the total disbursements from the Fund. However, a major release in a critical area, such as a public water supply or high density residential area, could result in a costly third party claim. It is important to maintain an adequate balance in the PCF to ensure there are adequate funds to provide an immediate and effective response where public health is at risk. Contaminated water supplies represent the majority of all third party claims. Future discovery of contaminated public water supplies is anticipated, since there are 42 leaking underground storage tank sites located in close proximity to public water supplies. There are an approximate 399 private wells at 133 sites serving an estimated population of over 1,100 people that have been contaminated by petroleum from leaking USTs. Attachment 6 shows the distribution of sites with a direct and immediate effect on public health and the environment over the past sixteen years. The Fund continued to provide reimbursements to municipalities where petroleum contaminated soils were encountered during public water or sewer lines projects. The added cost of properly handling the contaminated material as well as having proper personal protection for the on site workers is a third party cost eligible for reimbursement from the Fund. Each year this is an uncertain risk to the Fund.

In the 2002 legislative session, \$1,776,000 was transferred from the PCF into the state's general fund making the total general fund transfers since the fund began to \$5,501,000. In 2004, \$530,000 was transferred back into the PCF. This has helped to stabilize the fund balance. It is important that future transfers out of the fund do not occur. Future projections indicate that the long-term risks will exceed PCF resources. Maintaining a healthy balance is important to the long-term success of the PCF.

Review of Receipts to the Fund

A review of fund receipts for calendar year 2004 is summarized in Attachments 1 and 6. In 2004, total fund receipts for the motor fuel account were \$8,173,640. Owners of "Category One" storage tanks paid \$371,130 in tank assessment fees. The distributor licensing fee, a one cent assessment per gallon of motor fuel sold in the state, contributed \$4,194,500, a slight increase as compared to 2003. Other income includes the repayment of loans, \$304,680, and interest income of \$23,114, and the Legislature authorized the transfer of \$530,000 of funds that were previously transferred out of the PCF. In addition, the state successfully recovered \$2.7M from four sites where private insurance coverage should have been provided to the tank owner. The additional income to the PCF was critical to stabilizing a fund which was nearly insolvent one year ago.

In 2004, total fund receipts for the heating fuel account were \$92,930. This represented the collection of the ½ cent per gallon fee on heating fuels that were collected for the first quarter of FY05.

Review of Disbursements from the Fund

A review of fund disbursements for calendar year 2004 is summarized in Attachments 1, 2 and 3 . A review of fund disbursements over the history of the PCF is summarized in Attachments 5. In 2004, motor fuel account disbursements totaled \$6,133,164 and heating fuel disbursements totaled \$666,333. The included \$4,252,202 for remedial action for UST motor fuel sites, 132,596 for the UST replacement loan program, \$103,268 for the residential UST removal grant program, \$13,234 for the residential AST removal grant program, \$418,133 for remedial action for UST

heating fuel sites, \$485,945 for remedial action for AST heating fuel sites, \$525,000 for administrative costs (includes fee for FY04 & FY05), and \$184,517 for third party claims.

Disbursements for remediation represented a total of 1,139 different sites (Attachment 2 & 3), which includes sites which began remediation in prior years. Two of these sites have received reimbursements totaling more than \$1 million each for remediation costs. One of these cost over \$1.2 million; however, this site involves two separate properties where releases occurred, but the contamination is being managed as one site due to their close proximity and their effect on a public water supply. The other site also involves significant contamination to a bedrock aquifer. There are 23 different sites where extensive remediation is necessary, and the DEC has established agreements to reimburse over \$1.5 million for these cleanups. The cleanups for these sites are under the pay-for-performance (PFP) cleanup program. Under PFP cleanup, contractors are paid based on the effectiveness of the cleanup and not on a traditional time and materials basis. Lastly, 105 incentive grants were issued in 2004 for the closure of residential heating oil USTs totaling \$103,268. This brings the total grants awarded since 1998 to \$463,016. In addition, 15 grants were awarded in 2004 for the replacement of residential heating oil ASTs totaling \$13,234.

In all, 1,139 sites in 196 different towns have had investigations or cleanups that have benefited from the use of the Fund. Attachment 7 shows the distribution of these sites throughout the state.

In 2004 a total of \$132,596 in UST loans (including administrative fees) was advanced for tank replacement and/or upgrade work at four stations. One loan was for tank replacement and three for upgrades to existing double wall tank systems. In 2004, the legislature amended the loan program to enable tank owners to obtain a loan to remove their tanks without replacement. Two tank owner have applied for this assistance, with one approved for closing in 2005 when the tanks are removed. There are a total of 160 facilities that have taken advantage of UST replacements loans totaling over \$6 million in loans. Of those 160, 115 have been repaid. A total of 19 upgrade loans have been closed with one being repaid. There are currently 63 loans outstanding with a total balance owed of \$1,114,116.

Third party claims continue to represent a small portion of overall disbursements (4%). To date the PCF has paid \$2,995,552 for all third party claims, with \$184,517 in 2004 (Attachment 2).

Effectiveness of the Fund in Meeting Its Purpose

In 2003, the PCF balance fell below its required level of \$1 million for the first time since the fund's inception in 1988. In the 2004 Legislature steps were taken to restore the balance to a workable level. These steps included the repayment of \$530,000 from a transfer of \$1.76M in 2002 and the establishment of a ½ cent per gallon fee on heating fuels. In addition, the state successfully recovered \$2.7M from four sites where private insurance coverage should have been provided to the tank owner. These efforts have resulted in an end-of-year available fund balance of \$2.2M and has enabled the PCF to effectively meet its obligations for motor fuel related cleanups.. Despite the current fund balance, the reimbursements of heating oil related activities have been hampered by the delayed collection of fees and increased cleanup activity. The UST and AST farm and residential grant program was delayed in 2004 while issues over the collection of the fees were resolved.

Reasonableness of the Cost of Cleanup

In past years, the committee has reviewed the written policies and procedures of the DEC related to UST replacement, eligible costs and reimbursement procedures. In assessing the reasonableness of the cost of cleanup, the committee has reviewed national averages and comparative data from other states. The PCF Advisory Committee has concluded that agency staff responsible for this program have exercised prudent cost containment measures. A review of an annual survey conducted by the Association of State Underground Storage Tank Cleanup Funds shows that Vermont's cost of cleaning up contaminated sites is below those of other states. The continued efforts of Agency staff have helped to maintain reasonable cleanup costs in Vermont. The implementation of Vermont's pay-for-performance cleanup agreements has also helped to control costs.

Report to Legislature

Act 153 of the 2004 Legislature required the Committee to investigate the following items: Proposed standards for the installation of aboveground heating fuel storage tanks, or other mechanisms to prevent future releases from aboveground heating fuel storage tanks; proposed financial incentives to recipients of petroleum cleanup fund monies whose aboveground heating fuel storage tanks are in compliance with industry standards (NFPA Code 31); and, the effect of pollution liability insurance exclusions on the availability of homeowners insurance, and its impact on the petroleum cleanup fund.

The Committee does not recommend adoption of standards for the installation of aboveground heating fuel storage tanks, at this time. The Committee does support increasing outreach and education in an effort to reduce the number of future releases from aboveground tanks. The Vermont Fuel Dealers Association has agreed to investigate opportunities for educating tank installers, realtors, mobile home park owners, insurance underwriters, local officials and others that may be involved with properties where there are aboveground petroleum storage tanks. This may include developing training seminars and outreach materials.

The Committee considered proposed financial incentives to recipients of petroleum cleanup fund monies whose aboveground heating fuel storage tanks are in compliance with industry standards (NFPA Code 31). It was concluded that the existing farm and residential grant program is effectively providing incentive to remove aging tanks with replacement tanks installed within industry standards using state-of-the-art technologies. Over the past year demand for this program exceeded resources. The Committee recommends investigating other state and federal programs as a means of leveraging more funds to expand the number of tanks upgraded under this program.

In November 2004, the Department of Banking, Insurance, Securities and Health Care Administration conducted a survey of the insurance market to measure the availability of homeowners insurance for properties with aboveground and underground fuel storage tanks. Thirty insurance companies were surveyed with 28 companies responded, representing over 80 percent of the homeowners marketplace in Vermont. The companies were asked to respond to questions about whether they would write insurance for homes with fuel storage tanks, and if so, what criteria they used to determine if a specific home was acceptable. This process of selection criteria is called "underwriting." For homes with aboveground fuel storage tanks, of

the 28 companies surveyed, ten companies will write insurance with no underwriting restriction based on the existence of a fuel storage tanks, 17 have underwriting requirements, and one will not write insurance. For homes with underground fuel storage tanks, of the 28 companies surveyed, four will write insurance with no underwriting restrictions based on the existence of a fuel storage tank, 11 have underwriting requirements, and 13 will not write insurance. The results of this survey indicate that while a marketplace exists for homes with fuel storage tanks, the presence of a fuel storage tank is considered by most insurance companies in the underwriting process. The existence of a fuel storage tank can make obtaining homeowners insurance more difficult.

Recommended Statutory Changes to Chapter 59

1. The Committee does not recommend any statutory changes.

2004	1	8	13	8
Total	42	133	167	100

For each site with an affected receptor the number of actual Vermonters exposed to contamination can vary. The actual users for public water supplies can be as low as 25 people per system to as high as many thousands of users. For sites with affected private water supplies, the number of contaminated wells depends on the specific conditions of the site. On average there are approximately three contaminated wells discovered per site, with an average of 3 users per household. However, one of the 133 sites listed above involved contamination to over 80 wells affecting approximately 240 users, and a site discovered in 2002 involves contamination to over 30 wells, including a public water supply, affecting 100s of users. Sites with surface water impacts can affect both public health and the environment. High concentrations of petroleum in a stream can cause detrimental affects to biota, and lead to an increased exposure to stream users. Lastly, sites with indoor air impacts can lead to the greatest risk to public health. Petroleum vapors entering a home can be at levels that are explosive. More often petroleum vapors reach levels that pose a serious health risk. Of the 100 sites with indoor air impacts, the number of exposed individuals varied from site to site. An average site involves three homes affected with approximately three persons per home.

Sites that are discovered with contamination affecting a sensitive receptor requires immediate response. It is critical that the Petroleum Cleanup Fund maintain an adequate balance so that there are no delays in efforts to mitigate the serious public health and environmental presented at these sites.
