**2016**

## **303(d) LIST OF IMPAIRED WATERS**

### **PART A - IMPAIRED SURFACE WATERS IN NEED OF TMDL**

**OCTOBER 2016**

(Approved by USEPA Region 1 – September 7, 2016)

Prepared by:

Vermont Department of Environmental Conservation  
Watershed Management Division  
1 National Life Drive, Main 2  
Montpelier, VT 05620-3522

## Major Vermont River Basins

1. Battenkill
2. Poultney-Mettawee
3. Otter Creek
4. Lower Lake Champlain
5. Upper Lake Champlain
6. Missisquoi
7. Lamoille
8. Winooski
9. White
10. Ottauquechee
11. West
12. Deerfield
13. Lower Connecticut
14. Wells, Waits, Ompompanoosic
15. Passumpsic
16. Upper Connecticut
17. Lake Memphremagog

# PART A – IMPAIRED WATERS IN NEED OF A TMDL (303d LIST)

Part A of the 2016 List of Waters identifies impaired surface waters where a total maximum daily load (TMDL) is required. Part A of the List has been prepared in accordance with the Vermont Surface Water Assessment and Listing Methodology, current EPA Guidance and the Environmental Protection Regulations 40 CFR 130.7. A TMDL is deemed necessary for these waters (unless remediation will be completed prior to the scheduled TMDL) in order to establish the maximum limit of a pollutant that may be introduced into the water and still ensure the Water Quality Standards are attained and maintained.

## Explanation of Column Headings for Part A

Waterbody ID - An alphanumeric code used to spatially locate designated surface waterbodies. For example, VT01-02 and VT01-03L05 represent a river and a lake waterbody, respectively, located in Vermont river basin #01. River basin #01 includes the Batten Kill, Hoosic and Walloomsac rivers; there are 17 river basins for planning purposes identified in Vermont. A statewide map has been included that names these 17 river basins and identifies their approximate boundaries.

Segment Name/Description - The name of the river/stream segment or lake/pond. Entries denoted by “\*\*” indicate newly identified impairments since the 2014 list.

Pollutant(s) - The pollutant or pollutants that cause a violation of the Vermont Water Quality Standards.

Use(s) Impaired - An indication of which designated or existing uses are impaired. The following conventions are used to represent a specific use:

- |   |   |
|---|---|
| AES – aesthetics                                      | FC - fish consumption                   |
| ALS - aquatic life support                            | DWS - drinking water supply             |
| AWS - agricultural water supply                       | CR - contact recreation (i.e. swimming) |
| 2CR - secondary contact recreation (fishing, boating) |   |

Surface Water Quality Problem - A brief description of the problem found in the particular segment.

TMDL Completion Priority - An indication of priority as to when TMDLs will be completed (H=high 1-3 years, M=medium 4-8 years, L=low 8+ years).

	Lakes and Ponds	Streams and Rivers	Total
<b>Total number of impairment entries listed in Part A:</b>	15(2)	86 (18)	101

Number in parentheses ( ) represents new Part A listings since the 2014 listing cycle.

**Part A. Waters appearing below have documentation and data indicating impairment and do not meet VT Water Quality Standards according to the methodology described in the Vermont Surface Water Assessment and Listing Methodology. Required or needed pollution controls have yet to be fully implemented and further pollutant loading determinations (i.e. TMDLs) are necessary - unless remediation will be completed prior to the scheduled TMDL.**

<b>Waterbody ID</b>	<b>ADB Code(s)</b>	<b>Segment Name/Description</b>	<b>Pollutant(s)</b>	<b>Use(s) Impaired</b>	<b>Surface Water Quality Problem(s)</b>	<b>TMDL Priority</b>
VT01-02	01	HOOSIC RIVER, ENTIRE 7 MILE LENGTH IN VERMONT	PCBs	FC	ELEVATED LEVELS OF TOXIC CONTAMINANT IN BROWN TROUT	L
