STRESSED WATERS LIST

These waters are assessed as stressed where stressors are present that prohibit the waters from attaining a higher water quality

EXPLANATION OF COLUMN HEADINGS

Waterbody ID - An alphanumeric code used to spatially locate designated surface waterbodies. For example, VT01-02 and VT01-03L05 represent a river and a lake waterbody, respectively, which is located in Vermont river basin #01. River basin #01 includes the Batten Kill, Hoosic and Walloomsac rivers; there are 17 river basins for planning purposes identified in Vermont. A statewide map has been included that names these 17 river basins and identifies their approximate boundaries.

Segment Name/Description - The name of the river/stream segment or lake/pond.

Possible Pollutant(s) - The pollutant or pollutants causing the stressed condition.

Use(s) Stressed - An indication of which designated or existing uses (as defined in the VWQS) are stressed. The following conventions are used to represent a specific use:

AES - aesthetics

ALS or AH - aquatic life (biota and/or habitat) support

2CR - secondary contact recreation (fishing, boating)

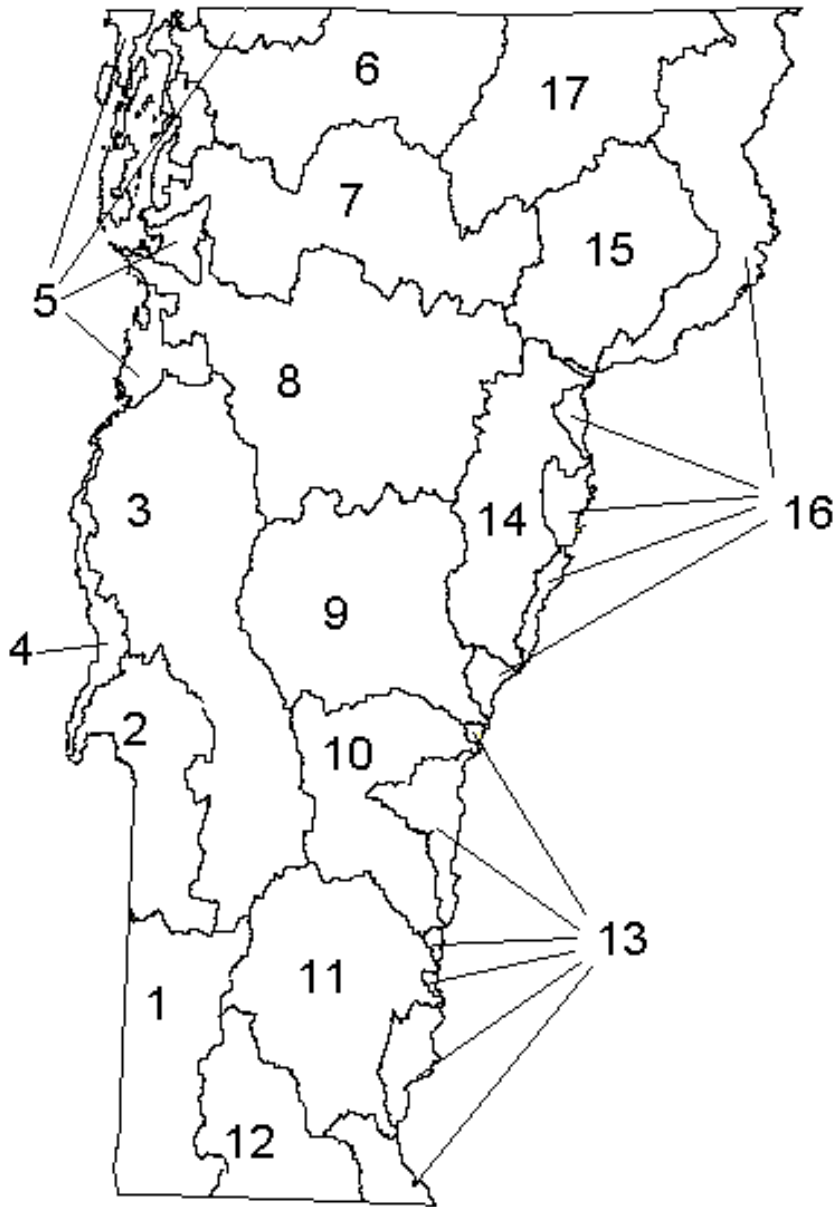

FC - fish consumption

DWS - drinking water supply

CR - contact recreation (i.e. swimming)

Surface Water Quality Problem - A brief description of the problem found in the particular segment.

Major Vermont River Basins

1. Battenkill
2. Poultney-Mettawee
3. Otter Creek
4. Lower Lake Champlain
5. Upper Lake Champlain
6. Missisquoi
7. Lamoille
8. Winooski
9. White
10. Ottauquechee
11. West
12. Deerfield
13. Lower Connecticut
14. Wells, Waits, Ompompanoosic
15. Passumpsic
16. Upper Connecticut
17. Lake Memphremagog

Stressed Waters List. Waters appearing below are have been assessed as stressed. While these waters are in compliance with the Water Quality Standards, stressors are present that impede the water from attaining the highest water quality.
