May 27, 2015 – Warwick Public Library, Warwick, RI – 9:00a.m. – 5:30p.m.

Workshop Description:

Your utility faces daily-to-day challenges providing reliable, safe drinking water for your customers while avoiding costly violations. The New England Water Works Association is offering a FREE one-day workshop to help your utility learn about compliance with drinking water regulations and steps to avoid costly violations. Workshop modules will also cover how to prevent microbial contaminants, and how to maintain optimal water quality including ways to optimize your system and reduce DBPs. This workshop is made possible by funding through the U.S. EPA and AWWA's partner, the Rural Community Assistance Partnership.

Continuing Education Credits - AWWA will offer TCHs for workshop attendance (pending state approval at time of mailing). Individual registration is required through NEWWA.

Audience: Operators, Managers, or Governing body of a small system

What topics will be covered at the workshop?

- Regulatory Review
 - Total Coliform Rule
 - Revised Total Coliform Rule
 - Groundwater Rule
 - Surface Water Treatment Rule
 - Stage 2 Disinfectants/ Disinfection Byproducts Rule
 - Lead and Copper Rule
- Microbial Contaminants
- Distribution System Operation and Maintenance
- Disinfection Byproducts Formation and Control

See Other Side for Additional Information and Registration Instructions

NOTE: As this is a free, grant-funded workshop, food cannot be provided. Please come prepared.

Attend this workshop, and you will be able to:

- Achieve and maintain compliance with drinking water regulations and avoid costly violations;
- Apply a multiple barrier approach for prevention of microbial contamination of your water;
- Disinfect your water appropriately and inactivate microbial contaminants;
- Manage distribution system infrastructure and disinfectant residuals to prevent microbial contamination;
- Collect microbiological samples (and corresponding chlorine residual samples) without contaminating the samples;
- Optimize treatment plant and distribution system operations to minimize DBP formation;
- Evaluate the most appropriate in-plant or distribution system treatment alternative that helps minimize DBP formation; and
- Describe the importance of the distribution system in maintaining water quality.

REGISTRATION:

Attending (check one ONLY):

☐ Massachusetts ☐ Vermont ☐ New Hampshire ☐ Maine ☐ Rhode Island

Name(s): _____

Company/Organization/System name: _____

Mailing address: _____

Phone number: _____

Population served by system ☐ 0-500 ☐ 501-3,300 ☐ 3,301-10,000

Email address: _____
