**SOUNDINGS.**  
 The Soundings are expressed in feet and show the depth at lowest water observed in August and September 1871.  
 The height of tide planes will be shown by marks at Burlington and other points on the Lake.  
 The characteristic soundings only are given on the map; they are selected from the numerous soundings taken in the survey so as to represent the figure of the bottom.  
 ..... Represents 6 feet curve.  
 ..... " 12 " "  
 ..... " 18 " "

**ELEVATIONS**  
 The curves of equal elevation are given for every 20 feet above the summer level of the Lake by continuous lines. Intermediate curves for 10 feet are in some places indicated by dotted lines.

Topography by H. G. OGDEN Assistant in 1872.  
 Hydrography by F. D. GRANGER Sub-Assistant in 1871.
