

**Twenty-Ninth Report on the
Status of the Petroleum Cleanup Fund**

10 VSA § 1941

January, 2017

This report includes a review of Petroleum Cleanup Fund receipts and disbursements for the fiscal year 2016, an evaluation of the effectiveness of the fund in meeting its legislative intent, and a review of the reasonableness of remediation costs is also included, as required by 10 V.S.A. §§ 1941(e), 1942(a), and 1942(b). This report also includes recommendations to address funding shortfalls in the heating fuel account.

Prepared by: The Petroleum Cleanup Fund Advisory Committee

PETROLEUM CLEANUP FUND ADVISORY COMMITTEE MEMBERS

Julie Moore:	Secretary, Agency of Natural Resources
Chuck Schwer:	Designated representative of the Commissioner, Department of Environmental Conservation (DEC)
Kevin Gaffney:	Designated representative of the Commissioner, Department of Financial Regulation
Joe Choquette:	Vermont Petroleum Association
Senator:	Mark MacDonald
Representative:	Mike Marcotte
Scott Bigger:	Designated representative of Lowell T. Spillane, Retail gasoline dealer
Dick Barnes:	A.R. Sandri, a licensed gasoline distributor (stepped down 9/13/16)
Dick Browne:	Champlain Oil Co., a licensed gasoline distributor (replacement)
Matt Cota:	Vermont Fuel Dealers Association
Peter Bourne:	Bourne's Energy, a licensed fuel dealer
Peter Tucker:	A licensed real estate broker

Executive Summary

This is the 29th annual report of the Petroleum Cleanup Fund (PCF) Advisory Committee. This report will provide a review of receipts and disbursements for fiscal year 2016, in accordance with 10 V.S.A. § 1941 and will evaluate the effectiveness of the PCF in meeting its legislative intent. This report will also highlight financial challenges within the fund and recommended solutions.

In FY16 the PCF continued to be the primary financial responsibility mechanism for Vermont underground storage tank owners. The PCF also provided financial resources necessary to remediate petroleum contamination at schools, homes, businesses, farms, churches, public works facilities and many other locations. The PCF provides a means to remediate releases that threaten public health and the environment. Petroleum releases have been discovered at more than 4,000 separate properties, with contamination discovered in drinking water wells, in the indoor air of homes and businesses, seeping into surface water bodies and at dangerous levels in public utility lines. Without the PCF many Vermont businesses, homeowners and public entities would struggle to fund expensive cleanups.

At this time, the motor fuel account is coming under significant financial stress due to the UST removal deadline for single-wall systems. By the end of 2017, a total of 142 of these systems at 54 facilities require removal. The severity of pollution cleanup claims related to single-wall tanks is anticipated to be as high as \$3,200,000. Additionally, demand for tank closure and replacement loans, will spike in 2017. Under 10 V.S.A. §1941, up to one-half of motor fuel licensing fees may be used to capitalize the loan program. This translates to approximately \$1,900,000 available for loans in FY17. In 2016, there were 37 single-wall USTs closed and seven loan disbursements. The average loan per facility performing a tank replacement was \$150,000. In 2017, the PCF could provide replacement loans at up to 12 of the remaining 54 facilities. Doing so, however, may put at risk the \$1 million fund balance federal requirement for providing financial assurance for motor fuel tank owners.

The heating oil account continues to be under significant financial pressure. Although past efforts at prevention have helped reduce the demand on the PCF, the number of releases and total expenditures (particularly for ASTs) demonstrated that more work was needed. Last legislative session, House Representative Connor of Fairfield introduced H.531 to require AST inspections to help prevent tank failure. The PCF Advisory Committee supported this Bill and believes oil heat tank inspections are critically important for bringing ASTs into compliance with Vermont's AST regulations. This Bill was enacted as Act 76.¹ This Act required that the Agency of Natural Resources (ANR) adopt rules for the inspection of ASTs on or before July 1, 2017. The PCF Advisory Committee is working with ANR to file the new rules with the Interagency Committee on Administrative Rules by the end of January 2017.

The continued success of the PCF depends upon the continued solvency of the fund. Critical site cleanup work remains at thousands of properties contaminated by petroleum underground storage tanks (USTs) and aboveground storage tanks (ASTs). Current pressures on the heating oil account and single-wall UST removal in 2017 further threaten fund solvency. At the request of the committee, ANR contracted an actuarial analysis of the PCF in 2016; the last analysis was done in 2005. The study reviewed historic data through FY16, and calculated projections through 2026. The actuarial report concluded, *"The fund is projected to be technically insolvent through 2026. This does not consider any potential legislative transfer of assets from the funds. Such a transfer would extend the period that the fund is technically insolvent."* The overall fund was projected to go below the \$1 million federal financial assurance requirement in FY18, with a low point of \$71,000 in FY19. To manage this situation, site cleanups and UST loans need to be prioritized by ANR to account for limited funds.

Description and Purpose

This is the 29th annual report on the status of the PCF. This report will look at the effectiveness of the fund in meeting its intended purpose, review the status of cleanups from motor fuel and heating oil releases from both aboveground and underground heating oil storage tanks, review the farm and residential UST and AST financial assistance programs and provide future PCF projections and recommendations, if needed.

In 1985, the General Assembly enacted Vermont's first law to regulate the construction, maintenance and operation of underground steel tanks used for the storage of petroleum products. Act 66 of the 1985 session established standards for new construction, and set a deadline of June 30, 1998, later amended to Dec. 22, 1998, for the removal or replacement of unprotected USTs.

In 1988 the legislature created the PCF, and appointed this advisory committee to oversee the financing, effectiveness and conduct of the program. The primary purpose of the PCF is to protect public health and the environment by paying for cleanup and restoration of contaminated soil and groundwater caused by releases from underground petroleum storage tanks, and to compensate third parties for property damage and bodily injury. Many changes have been made since 1988, including the inclusion of pollution coverage for ASTs and a farm and residential UST (1998) and AST (2004) financial assistance program. The Fund also provides loans to motor fuel tank owners for tank removal, replacement, and upgrade of equipment. The current deadline for filing a claim against the fund is July 1, 2019.

The PCF provides financial assurance to UST owners, who are required by state and federal law to provide coverage for up to \$1 million for cleanup and \$1 million for third party liability. Since such affordable comprehensive insurance coverage continues to be difficult or impossible to find for tank owners, the PCF enables tank owners to meet their financial responsibility (FR) requirements. By law, the U.S. EPA must approve the operation and viability of a state fund before it may serve as a financial responsibility mechanism for UST owners. EPA accepted Vermont's fund as a financial assurance mechanism in 1990, with the requirement that a minimum balance of \$1 million be maintained.

In 2004, the Legislature extended coverage to homeowner heating oil tanks and enacted a fee on heating fuel to create a revenue source for the heating oil related activities covered by the PCF. The PCF was also divided into two separate accounts: a motor fuel account and a heating oil account, with both revenue and expenditures to be managed within each account. In 2010, the fee on heating oil and kerosene was increased from a ½ cent per gallon to a full cent.

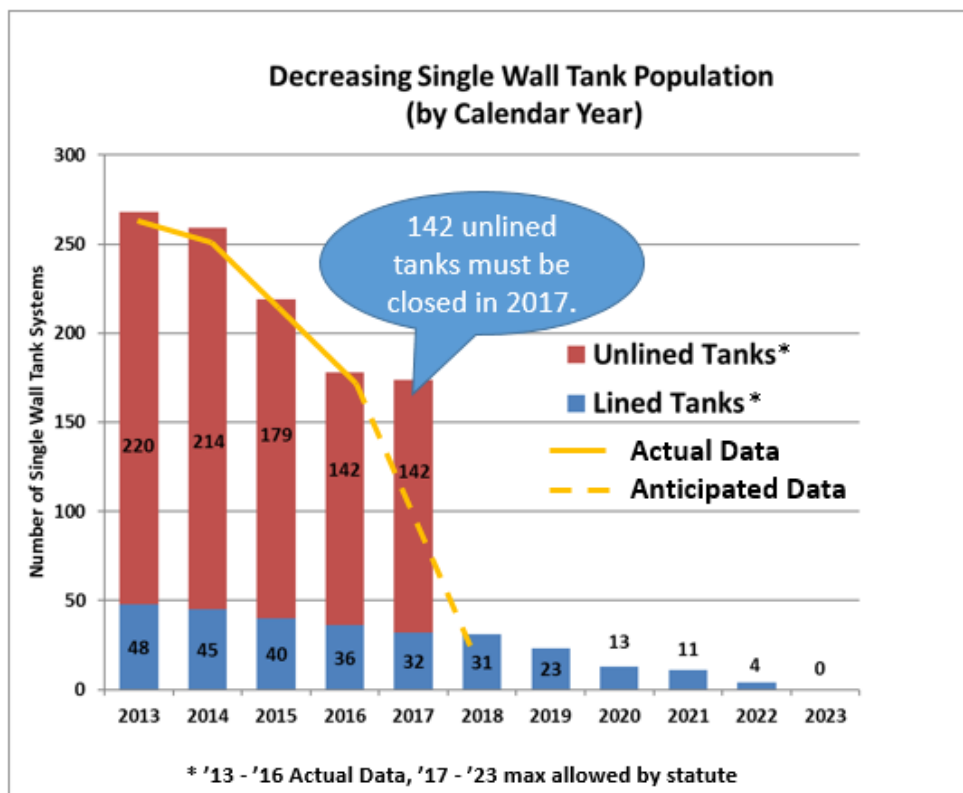

Revenue for the motor fuel account comes from an annual assessment fee of up to \$100 per tank on most underground tanks, (\$250 for combination systems where the single-walled tank is lined and \$500 for unlined combination single-walled tank systems) and a "distributor licensing fee" of one cent per gallon of motor fuel sold in the state. Additional revenue comes from the repayment of loans, recovery of some costs from responsible parties and interest accruing upon any cash balance in the fund. The sunset date for collection of the motor fuel and heating fuel fees is April 1, 2021.

Expenditures include the cost of cleanup, third party payments, loans to tank owners, financial assistance to homeowners to assist in the removal of heating oil USTs and replacement or upgrade of ASTs, and administrative expenses. Each uninsured cleanup undertaken in the state becomes eligible for fund assistance after the party responsible for the tank meets a certain "deductible," a co-insurance payment based on the circumstances of ownership. For commercial entities, the deductible is set at

\$10,000 per occurrence, although single-walled tank owners pay a higher deductible, and commercial heating oil USTs less than 1,100 gallons pay a \$250 deductible. For homeowners, a deductible of \$250 must be met. Owners of commercial heating oil ASTs meet a \$1,000 deductible.

Risks to Fund Solvency

One of the biggest risks to the fund is the remaining population of single-walled underground storage tank systems. Beginning on July 1, 2014, owners of single-walled tanks began paying a higher annual tank assessment fee and would also be assessed a higher deductible in the event of a release. Over the past year, the number of single-walled USTs has been reduced from 225 to 178 (as of 11/14/16). Single wall systems comprise approximately 9% of the current tank population. Of the 178 single-walled tanks, 142 are unlined and are located at 54 facilities. The remaining 32 lined systems are located at 12 facilities. All unlined tanks must be closed by Jan. 1, 2018. Only 33 of the unlined tanks were closed in 2016, less than the 50 anticipated in last year's report. The remaining 142 tanks will need to be removed in 2017 to comply with the January 1, 2018 deadline. Due to lined tanks having an added level of protection, they do not require removal until Jan. 1, 2018, or by ten years from the date the tank was lined, whichever is later. The last tanks to be lined were in 2013, therefore we expect the last lined tanks to be closed by 2023. See graph below of the decreasing single-wall tank population.

These single-wall systems pose a greater risk of an undetected leak due to the lack of secondary containment, and can cause considerable harm in the environment. The severity of claims from these remaining single-wall tanks could range from \$1,300,000 to \$3,200,000. There are currently 178 remaining single-wall tanks at 64 facilities, and the above claim estimate assumes releases at between 13 and 32 of these facilities. Our 2016 actuarial study shows that the average severity of claims for *all* UST releases over the past decade is approximately \$70,000 and, as past reports have discussed, releases from single-wall systems can easily be at least 40% more costly (or \$100,000 per claim). This is because

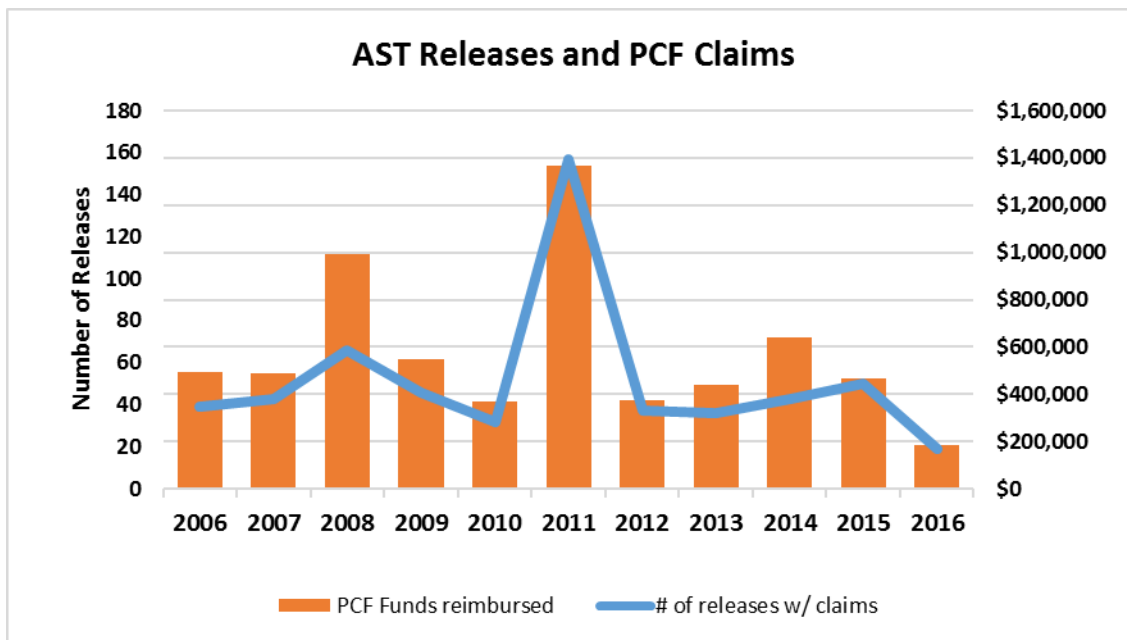

undetected releases from these systems can be substantially larger than at systems with secondary containment.

The solvency of the PCF also remains at risk due to the large number of contaminated properties that are eligible for reimbursement. There are currently 2,637 properties where the PCF has made disbursements. In 2016, petroleum releases were discovered at another 129 properties that are PCF eligible. Of these, 70 releases were from above ground storage tanks (ASTs), which is 16 fewer than 2015; 58 were from heating fuel, nine from motor fuel, and three other petroleum products. Of the 58 heating fuel AST releases, 19 were from outdoor kerosene tanks (12 fewer than 2015) and 39 were predominantly basement indoor tanks. The other 59 releases were from UST releases: six were from permitted motor fuel tanks and the other 53 were from heating oil tanks. This large number of contaminated properties will result in continued disbursements from the PCF. A number of older sites remain that require remediation and hence future PCF disbursements. These older sites tend to be the most expensive sites to clean up in part due to the size and complexity of the release. The USEPA Office of Underground Storage Tanks has made addressing the site backlog a priority. Of the approximate 1,000 sites remaining in an active status where PCF eligible work needs to be completed, 651 are leaking motor fuel UST sites. Attachment 2 provides a detailed list of properties that have received reimbursements from the PCF for motor fuel releases.

PCF Income and Expenses for each calendar year from 1988 to the present for both the motor fuel and heating oil accounts are tabulated in Attachment 6. The table showing expenses highlights the shortfalls in the heating oil account from 2005 until the present, as years 2005 -2009 required a transfer of \$3,400,000 from the motor fuel account, another \$750,000 was legislatively transferred to help with Tropical Storm Irene, and another transfer from the motor fuel account may be needed in 2017 as the account has reached a negative balance. This table also displays other transfers of funds by the legislature since the fund was established in 1989. An actuarial study completed in 2005 and 2016 found that the fund was technically insolvent (projected liabilities exceed assets of the fund) through 2015 and 2026, respectively. A \$2.8 million transfer of funds out of the PCF in FY09 has further increased the gap between projected liabilities and fund assets.

As shown in the figure below, after modest numbers of AST releases and expenditures for 2012 and 2013 releases, there was an uptick in the number of releases in both 2014 and 2015 coinciding with colder winters. This translated into increased claims and cleanup costs for 2014 and 2015 releases. Though claims have ceased on 2013 releases, claims continue to be received for 2014 and 2015 – since last report another \$235,000 in claims were made for 2014 releases and just over \$200,000 for 2015 ones. For 2016, the data is nowhere near final since releases are still occurring and claims have not been made yet for several releases. For example, we had 70 AST releases in 2016, but only 19 claims have been made to date. Still, we anticipate that overall 2016 data will be in line with 2012 and 2013 given the milder winter. Looking longer term, we anticipate a decrease in both cost and number of releases given our efforts at prevention through the residential and farm AST financial assistance program and the addition of the tank inspection requirements to the AST rules in FY17. Inspections will be phased in over a period of 3-5 years (to be determined during rulemaking). As more and more tanks are upgraded to the new standards, fewer and fewer tank releases will occur. However, during the initial inspection phase in period an increase in claims is anticipated as releases are discovered during inspections of older tanks.

The figure below also highlights the vulnerability of the fund. In 2011, Tropical Storm Irene alone caused more than 90 AST releases costing the PCF more than \$800,000 in cleanup expenses. The legislature provided \$750,000 in funds to cover these costs. Without this additional income, the fund could not have absorbed these higher costs.

The PCF has provided cleanup funds for heating oil contamination at schools, homes, businesses, farms, churches, public works facilities and many other locations. Attachment 3 provides a detailed list of properties that have received reimbursements from the PCF for heating fuel releases. The farm and residential financial assistance program for heating fuel tanks continues to remain very successful, as hundreds of tanks are removed or upgraded each year.

The PCF's highest priority is to protect human health and the environment from exposure to petroleum from tank releases. This was highlighted at a Barre site where explosive gasoline vapors were discovered in the fall of 2012 in the town's sewer system and in people's homes causing unhealthy exposure to the residents. In addition, hundreds of people were at risk of severe injury and death had there been an explosion in the sewer system. Immediate corrective action eliminated this significant risk to public health.

More than 4,000 separate properties have been discovered with contamination and many of these have affected drinking water wells, contaminated indoor air of homes and businesses, have migrated into surface water bodies and have been found at dangerous levels in public utility lines. For example, more than 200 separate sites have been discovered where nearly 1,000 public or private drinking water wells have been contaminated. Attachment 4 provides a list of the number of sites discovered each year that have had a direct effect on a sensitive receptor. To address human health and environmental exposures to releases the fund has authorized proactive measures which include rapid initial response to releases, providing bottled water and point-of-entry treatment for contaminated drinking water, aggressively recovering free product, protecting surface water bodies, indoor air remediation and mitigation of dangerous petroleum vapors.

Sites that have a direct effect on public health and the environment are the program's most critical priority and demand the greatest level of effort. These same sites also present the greatest risk to fund solvency. Over the history of the program, the sites that have affected public water supplies or sensitive environmental areas have required extensive remediation at a high cost to the PCF. A site discovered in Killington had more than 80 private wells that were contaminated with a gasoline additive, MTBE. One home even had to endure significant disruption to the use of its well, as the well was so contaminated that at one point it was used as a remediation well. It is important to maintain a sufficient balance in the PCF,

in excess of the required \$1 million federally mandated reserve, to ensure there are adequate funds to provide an immediate and effective response where public health is at risk.

Legislative transfer of funds continues to be a risk to fund solvency. In FY09, \$2.8 million was transferred out of the PCF and as a result some cleanups had to be delayed. According to a 2005 actuarial study, the Fund was “**projected to be technically insolvent (projected liabilities exceed assets of the fund) through 2011.**” This actuarial assessment was prior to the subsequent increases in covered AST heating oil releases and it did not foresee any potential legislative transfers of assets from the fund. Maintaining a healthy cash balance above the federally mandated \$1 million reserve is important to the long-term success of the fund. The \$2.8 million legislative transfer of PCF funds expands the gap between projected liabilities and fund assets.

The last actuarial study was performed in 2005; one year after the legislature extended PCF coverage to homeowner heating oil tanks and enacted a fee on heating fuel. There is now an additional decade of data under this new funding and expenditure framework, which in part is why the PCF Advisory Committee requested ANR moving forward with an actuarial study in 2016. One finding not previously discussed is that *“If all claims discovered (this includes both old sites as well as ones recently discovered) were to be paid in full on June 30, 2016, the fund is projected to have a \$26.2 million deficit on that date.”* For comparison, the prior 2005 study found that this deficit would be \$10.5 million on December 31, 2005. A paramount concern is the finding that the overall fund balance is projected to fall below \$1 million in FY18, and have a projected balance of only \$71,000 at the end of FY19. A minimum \$1 million fund balance is the federal requirement for providing financial assurance for motor fuel tank owners. The reason for this projected shortfall is linked to single-wall UST removal deadline on December 31, 2017. Based on the recent claim rate, the study assumed 12 new claims in FY18 with an additional \$1.2 million impact on the fund – though with payments spread out per the historical payment pattern. More significantly, the study assumed that increased demand for UST replacement loans would result in a \$900,000 increase over the base amount of \$300,000 for the years FY17-FY19, an increase of \$1.8 million above normal levels.

A review of fund receipts for FY16 is summarized in Attachment 1. In FY16, total fund receipts for the motor fuel account were \$4,605,776. This represents an increase in revenue of \$265,251 as compared to FY15 and is mostly attributable to a large cost recovery action. The distributor licensing fee, a one cent per gallon assessment of all motor fuels sold in the state, contributed \$3,864,384, an increase of \$22,710 over FY15. Owners of “Category One” storage tanks paid \$222,125 in tank assessment fees, a decrease of \$8,150 over FY15, but still up \$44,000 from FY14. Overall tank assessment revenue increased starting FY15, when higher tank fees began getting assessed on tank systems that are not fully double walled to incent their removal. This revenue is expected to decrease again after FY18, as many higher assessment fees will still be due in FY18 for single wall tank systems requiring removal by January 1, 2018; additionally, the overall tank population is beginning to trend down. Repayment of motor fuel UST loan income increased significantly, totaling \$287,689. This is an increase of \$47,978 over FY15, and over \$108,000 since FY14. This reflects increasing outstanding loan balance that is from increased loan demands to help tank owners meet the single-wall tank system closure deadline. Loan interest totaled \$11,581, an increase of \$6,276 from FY15. In addition, the state successfully recovered funds totaling \$212,556, an increase an increase of \$192,670 over FY15. Of the cost recovery total, \$200,000 was from a major petroleum distributor’s insurance company, and related to a new release requiring cleanup in Fairfax. Interest paid on the PCF account was \$7,764, an increase of \$4,415 from FY15.

In FY16, total fund receipts for the heating fuel account were \$1,259,257, a decrease of \$63,664 compared to FY15. This decrease was unsurprising given the milder winter compared to record cold in

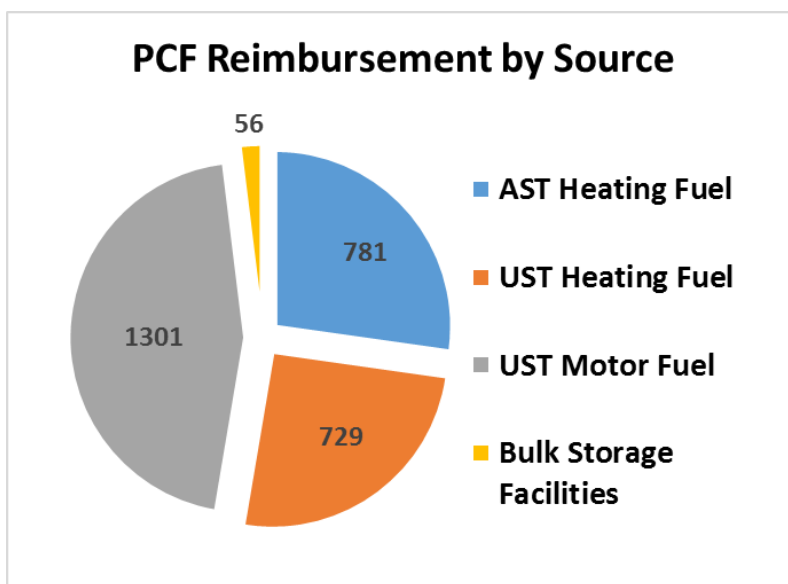

FY15. The Vermont Fuel Assistance Program also supports our prevention efforts and has begun providing \$75,000 annually to supplement the residential tank removal assistance program.

Review of Disbursements from the Fund

A review of fund disbursements for FY16 is summarized in Attachments 1, 2, and 3. In FY16, motor fuel account disbursements totaled \$4,163,931 an increase of \$293,205 over FY15, and heating fuel disbursements totaled \$1,411,939 a slight decrease of \$3,260 over FY15. Notably, at the end of FY16, some lower priority heating fuel work was deferred to FY17 given the negative fund balance.

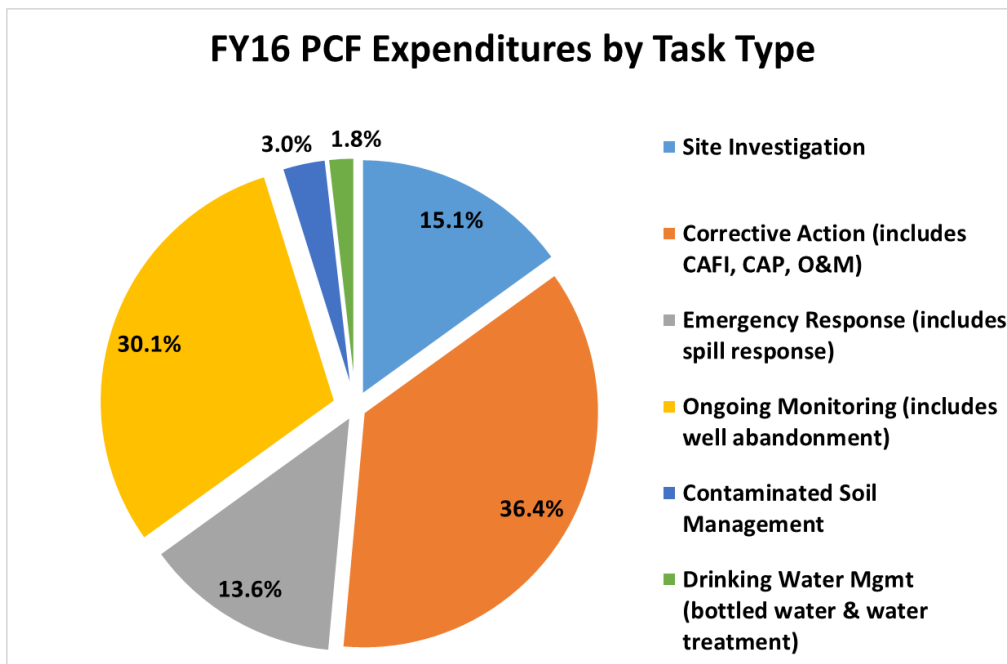

Expenditures from the motor fuel account included \$3,083,713 for remedial action at UST motor fuel sites, \$691,985 for the UST replacement loan program, \$165,803 for third party claims, and \$115,944 for bulk storage remedial action. Disbursements from the heating oil account included \$441,483 for remedial action for UST heating fuel sites, \$47,313 for the residential UST removal program, \$617,012 for remedial action for AST heating fuel sites and \$304,289 for the residential AST removal grant program.

Since the inception of the PCF in 1988, the Fund has disbursed money across a total of 2,867 different properties (Attachment 2 & 3), which includes sites where remediation occurred in prior years. The figure below provides a breakdown of the types of PCF reimbursement sites. These sites are located throughout Vermont in 232 different towns. Attachment 5 shows the distribution of these sites throughout the state.

Third party claims continue to represent a small portion of overall disbursements (<5 percent). At the end of FY16 the PCF has paid \$5,648,999 for all third-party claims, with \$165,803 paid out in FY16.

In the chart below, PCF expenditures for FY16 are broken out by task type. A total of 53 percent of expenditures were cleanup related, of which 13.6 percent was for emergency response, 36.4 percent for site corrective action, and 3 percent for contaminated soil management. Ongoing monitoring costs comprised 30 percent of costs. In the future, monitoring will be broken out to differentiate between monitoring to help determine the cleanup remedy, and “monitored natural attenuation,” which is an actual remedy when biodegradation, dilution, dispersion and other natural processes are adequate for bringing a site to closure. The other major expenditure type was “site investigation,” which accounted for 15 percent of expenditures. A total of 3 percent of expenditures were for bottled water and drinking water treatment.

Investing in Prevention Activities

New rules being promulgated in FY17 will require routine AST inspections, inspector training and training certification. These new rules will be critical for reducing the number and severity of annual AST spills. The last update to the AST Rules was on Feb.10, 2014. In response to that update, ANR created an online list of red-tagged tanks, which records tanks that should not receive deliveries due to high risk of a release. ANR also created an online “red tag” form for dealers to add to this list. Expanded usage of this red-tagged tank list is anticipated once routine inspections are required by rules currently being promulgated. In late 2016, ANR began tracking the fuel dealer at all AST releases for targeted prevention efforts in the future. There have also been direct communications with homeowners by fuel dealers and a tremendous amount of outreach to the media to educate the public on the state's AST regulations. This outreach has occurred without taxpayer expense, thanks to the partnerships with businesses and non-profits such as VFDA, VPA and the VT Association of Realtors. These partnerships will continue to be used for outreach and education of new regulations.

Important leak-prevention activities have been funded by the PCF over the years that have helped to mitigate risks and reduce future costs. These include providing financial assistance awards to farm and residential properties to remove and replace aging aboveground and underground heating oil tanks, and providing interest free loans to upgrade underground storage tanks. With the adoption of new AST regulations in October 2011, which recommended routine inspection of old tanks, there has been an increase in demand for the AST replacement grant. This demand will undoubtedly further increase once routine inspections are required in the new rules due out in FY17. The AST requirements have also increased the cost of proper tank installation. This includes installing a concrete pad and a roof for outside tanks that are not under the gable end of a building.

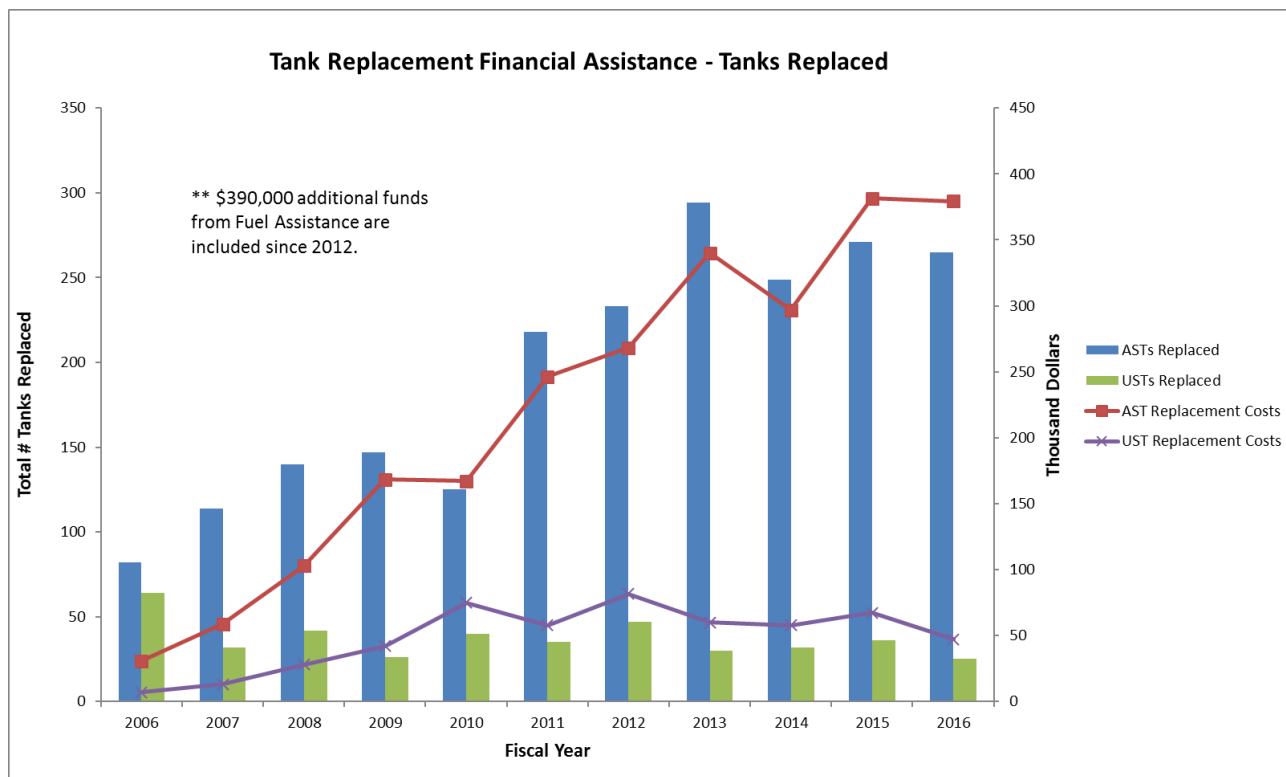

Financial assistance was implemented for removal of home heating oil USTs (in 1998) and replacement or upgrade of ASTs (in 2004) to encourage the repair or removal and replacement of non-compliant tanks before leaks and releases occur. The average cleanup cost for home heating USTs is \$15,470, and AST cleanup costs have averaged \$11,097. The committee believes this assistance has been

an excellent investment, as millions of dollars on cleanup costs have been avoided by removing these tanks before they leak.

Grants for Residential Heating Oil USTs (Removal). A total of 25 assistance awards were approved in FY16 for the closure of residential heating oil USTs; all but one award was for the maximum of \$2,000. Additional awards were halted in January 2016 due to the overall assistance program caps having been met. Total reimbursement in FY16 for UST assistance was \$47,313 which brings the total amount awarded for USTs since the program began to \$949,162.

Grants for Residential Heating Fuel ASTs (Replacement or Upgrade). A total of 265 assistance awards were approved in FY16 for the replacement or upgrade of residential heating fuel (kerosene or heating oil) ASTs. Total reimbursement in FY16 for AST financial assistance was \$304,289, which brings the total amount awarded since the program began to \$1,985,825 in AST assistance funding. In addition to these funds, the Vermont Fuel Assistance program provided an additional \$75,000 to be used for AST replacement at residential properties with low income homeowners. Demand for the program remains high and is helped by the legislatively increased spending caps from \$350,000 to \$400,000. *See* 2016 Act 66 §1. Through just the first five months of FY17, \$480,000 has been approved for AST assistance alone. Normally, not all awards are used, but if demand exceeds supply then priority will be given to red-tagged tanks, followed by the order awards were given.

Total Grants for Residential Heating Fuel (USTs and ASTs). In total the UST and AST financial assistance program has funded the removal, replacement and/or upgrade of 2,939 aging petroleum storage tanks; of this 2,276 ASTs have been replaced or upgraded with compliant tanks and 663 USTs have been removed. The figure below depicts the annual number of tanks removed and funds awarded from 2006-2016.

Loans for Commercial Motor Fuel USTs (Removal or Replacement). In FY16, disbursement for UST motor fuel loans were made on seven sites in the total amount of \$691,985. The agency continues to contract for services of a certified accountant to review tank owner's financials for determination of ability to repay and suggested collateral for each loan. We anticipate a sharp increase in loan program applications in FY17 to assist tank owners comply with the January 1, 2018 deadline to remove single-wall combination tank systems, with or without a replacement system. As of June 30, 2016, the amount of \$1,919,310 was the outstanding loan balance due to the Fund, which is an increase of \$598,892 over FY15. ***Loans for Non-Residential Heating Oil USTs (Replacement).*** The UST Program has received a number of inquiries from owners of commercial buildings, churches and schools (public and private) who are seeking funding sources for the replacement of their large on-premises heating oil tanks. To date one school district (now paid), one private school, one town Library, and one residence (loan closed FY16) have received interest-free loans.

Effectiveness of the Fund in Meeting Its Purpose

The fund was effectively able to meet its purpose of funding cleanups and providing financial assurance for **underground** gasoline storage tank owners in Vermont in FY16. Throughout the year there was an adequate balance in the motor fuel account. However, as anticipated in last year's report, the heating fuel account ended the year with a negative balance of \$33,726; revenue was down for this account by \$63,664 from FY15, while expenditures were also down but only by \$3,260. Claims for both accounts were processed in a timely manner. Notably, a number of motor fuel UST contaminated sites have approved corrective action plans on hold due to the limited resources in the fund, and a significant number of new releases from motor fuel USTs are anticipated in FY17 as owners of single-wall tank systems remove these systems to meet the January 1, 2018 closure deadline.

Reasonableness of the Cost of Cleanup

In past years, the committee has reviewed the written policies and procedures of the DEC related to UST replacement, eligible costs and reimbursement procedures. In assessing the reasonableness of the cost of cleanup, the committee has reviewed national averages and comparative data from other states. The PCF Advisory Committee has concluded that agency staff responsible for this program has exercised prudent cost containment measures. A review of the latest annual survey (2015) conducted by the Association of State Underground Storage Tank Cleanup Funds shows that Vermont's average cost of cleaning up contaminated sites is below almost all other states, including the lowest in New England. The continued efforts of Agency staff have helped to maintain reasonable cleanup costs in Vermont.

Recommended Statutory Changes to Chapter 59

The Committee makes no statutory recommendations at this time.

For each site with an affected receptor the number of actual Vermonters exposed to contamination can vary. The actual users for public water supplies can be as low as 25 people per system to as high as many thousands of users. For sites with affected private water supplies, the number of contaminated wells depends on the specific conditions of the site. On average there are approximately three contaminated wells discovered per site, with an average of 3 users per household. However, one of the 161 sites listed above involved contamination to over 80 wells affecting approximately 240 users, and a site discovered in 2002 involves contamination to over 30 wells, including a public water supply, affecting hundreds of users. Surface water impacts can affect both public health and the environment. High concentrations of petroleum in a stream can cause detrimental affects to biota, and lead to an increased exposure to stream users. Lastly, sites with indoor air impacts can lead to the greatest risk to public health. Petroleum vapors entering a home can be at levels that are explosive. More often petroleum vapors reach levels that pose a serious health risk. Of the 141 sites with indoor air impacts, the number of exposed individuals varied from site to site. An average site involves three homes affected with approximately three persons per home.

Attachment 5: Distribution of Vermont PCF Sites

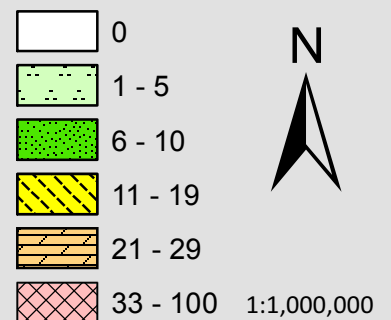

Agency of Natural Resources

Most Active Vermont PCF Towns

Town	Total
Rutland City	97
Bennington	96
Burlington	94
Stowe	82
South Burlington	75
Montpelier	67
Waterbury	58
Brattleboro	57
Hartford	54
Barre City	53

PCF Sites by Town '15

This map represents the distribution of sites in Vermont that have received PCF funding through the 2015 fiscal year. Towns are labeled by the number of sites that have received such funding. Statewide, there have been a total of 2,508 properties that have received PCF funding, in 232 different towns.

*A small number of sites were removed from this list as part of a data cleanup from 2012 to 2013.

Appendix 6

Annual Petroleum Cleanup Fund Expenses (through June 2016)							
Year	Motor Fuel (MF)	Heating Fuel (HF)	3rd Party (MF)	UST Loans (MF)	UST/AST Grants	MF to HF Transfers	Legislative Transfers
1989	\$954,767			\$104,725			(\$700,000)
