

**Thirty-Second Report on the
Status of the Petroleum Cleanup Fund**

10 VSA § 1941

January 2020

This report includes a review of Petroleum Cleanup Fund receipts and disbursements for the fiscal year 2019, an evaluation of the financial stability of the fund and its effectiveness in meeting its legislative intent, as required by 10 V.S.A. §§ 1941(e), 1942(a), and 1942(b). This report also includes an evaluation of assistance related to underground farm and residential heating fuel storage tanks and aboveground storage tanks, and the need for continuing assistance, and includes recommendations.

Prepared by: The Petroleum Cleanup Fund Advisory Committee

PETROLEUM CLEANUP FUND ADVISORY COMMITTEE MEMBERS

Julie Moore:	Secretary, Agency of Natural Resources
Chuck Schwer:	Designated representative of the Commissioner, Department of Environmental Conservation (DEC)
Kevin Gaffney:	Designated representative of the Commissioner, Department of Financial Regulation
Erin Sigrist:	Vermont Petroleum Association (Vermont Retail & Grocer's Association)
Senator:	Brian Champion
Representative:	Mike Marcotte
Scott Bigger:	Designated representative of Lowell T. Spillane, Retail gasoline dealer
Dick Browne:	Global Montello Group Corp., a licensed gasoline distributor
Matt Cota:	Vermont Fuel Dealers Association
Peter Bourne:	Bourne's Energy, a licensed fuel dealer
Peter Tucker:	A licensed real estate broker

Cover photo: An AST in Halifax, Vermont that was red tagged for multiple violations and representative of many of the older tanks still in service that are at a higher risk of a release.

Executive Summary

This is the 32nd annual report of the Petroleum Cleanup Fund (PCF) Advisory Committee. This report will provide a review of receipts and disbursements for fiscal year 2019, in accordance with 10 V.S.A. § 1941 and will evaluate the effectiveness of the PCF in meeting its legislative intent. This report will also highlight financial challenges within the fund and will provide recommendations.

In fiscal year 2019 the PCF continued to be the primary financial responsibility mechanism for Vermont underground storage tank (UST) owners, which is required by state and federal law. The PCF also provided financial resources necessary to remediate petroleum contamination at schools, homes, businesses, farms, churches, public works facilities and many other locations. The PCF provides a means to remediate releases that threaten public health and the environment. Since the inception of the fund, petroleum releases have been discovered at more than 4,000 properties, with contamination discovered in drinking water wells, in the indoor air of homes and businesses, seeping into surface water and at dangerous levels in public utility lines. Without the PCF many Vermont businesses, homeowners and public entities would struggle to pay for expensive cleanups. Critical site cleanup work remains at nearly 1,000 properties contaminated by releases from petroleum USTs and aboveground storage tanks (ASTs). The continued success of the PCF depends upon the continued solvency of the fund.

The heating oil account in fiscal year 2019 experienced a positive annual balance and significantly lower cleanup expenditures for the second consecutive year. The primary reason for this was the continued decrease in AST cleanup costs. This success is partially attributable to increased prevention efforts, through both new regulation and increased tank replacement financial assistance. The AST Rules were revised in 2017 in response to Act 76 and require tank inspections every three years and include a delivery prohibition to tanks with a high risk of a fuel release. The State of Vermont provided tank replacement and upgrade grants to low-income tank owners, and the Vermont Fuel Dealers Association provided financial incentives for heating oil and kerosene tank owners to replace a non-compliant tank through the Vermont Fuel Tank Rebate Program. Over 800 ASTs were replaced with new tanks through low-income assistance and incentives, and many more were replaced independently in response to the new inspection requirements. Using solely PCF funding, 297 ASTs were replaced in fiscal year 2019 and 3,166 since the program began. After August 2020, the deadline for all initial AST inspections, we anticipate significantly fewer costly AST releases. In the first two fiscal years following the tank inspection requirement, AST cleanup expenditures have decreased by 40% (2019) and 36% (2018) from fiscal year 2017, which preceded the new rules.

The motor fuel account has significant financial risk associated with the backlog of 619 open motor fuel UST sites, many of which now require groundwater reclassification and cleanup under the amended Groundwater Protection Rule and Strategy that became effective Jul. 6, 2019. Where groundwater contamination has migrated beyond the property boundary, sites will require reclassification of groundwater to non-potable conditions, which prohibits installation of new drinking water wells. Cleanup of those sites will be required to return groundwater to potable conditions. ANR is currently determining the number of sites that are subject to the new requirements and is prioritizing them since the motor fuel account lacks enough funding to remediate them all. Historically, ANR has prioritized cleanup based risk to human health and the environment.

Description and Purpose

This is the 32nd annual report on the status of the PCF. This report will look at the effectiveness of the fund in meeting its intended purpose, review the status of cleanups from motor fuel and heating oil releases from both aboveground and underground heating oil storage tanks, review the farm and residential UST and AST financial assistance programs and provide future PCF projections and recommendations, if needed.

In 1985, the General Assembly enacted Vermont's first law to regulate the construction, maintenance and operation of underground steel tanks used for the storage of petroleum products. Act 66 of the 1985 session established standards for new construction, and set a deadline of June 30, 1998, later amended to Dec. 22, 1998, for the removal or replacement of unprotected USTs.

In 1988 the legislature created the PCF, and appointed this advisory committee to oversee the financing, effectiveness and conduct of the program. The primary purpose of the PCF is to protect public health and the environment by paying for cleanup and restoration of contaminated soil and groundwater caused by releases from underground petroleum storage tanks, and to compensate third parties for property damage and bodily injury. Many changes have been made since 1988, such as the inclusion of pollution coverage for ASTs and farm and residential USTs (1998) and the addition of the AST financial assistance program (2004). The Fund also provides loans to fuel tank owners for tank removal, replacement, and upgrade of equipment. The current deadline for filing a claim against the fund is July 1, 2029.

The PCF provides financial assurance to UST owners, who are required by state and federal law to provide coverage for up to \$1 million for cleanup and \$1 million for third party liability. Since such affordable comprehensive insurance coverage continues to be difficult or impossible to find for tank owners, the PCF enables tank owners to meet their financial responsibility (FR) requirements. By law, the United States Environmental Protection Agency (U.S. EPA) must approve the operation and viability of a state fund before it may serve as a financial responsibility mechanism for UST owners. U.S. EPA accepted Vermont's fund as a financial assurance mechanism in 1990, with the requirement that a minimum balance of \$1 million be maintained. U.S. EPA annually reviews and assesses the soundness of Vermont's cleanup fund. The most recent report was filed in September 2019, and no concerns have been reported by EPA.

In 2004, the Legislature extended coverage to homeowner heating oil tanks and enacted a fee on heating fuel to create a revenue source for the heating oil related activities covered by the PCF. The PCF was also divided into two separate accounts: a motor fuel account and a heating oil account, with both revenue and expenditures to be managed within each account. In 2010, the fee on heating oil, kerosene and dyed (off-road) diesel was increased from a half cent per gallon to a full cent.

Revenue for the motor fuel account comes from an annual assessment fee of up to \$100 per tank on most underground tanks, (\$250 for combination systems where the single-walled tank is lined) and a "distributor licensing fee" of one cent per gallon of motor fuel sold in the state. Additional revenue comes from the repayment of loans, recovery of some costs from responsible parties and interest accruing upon any cash balance in the fund. The sunset date for collection of tank assessment fees is July 1, 2029, and for the motor fuel and heating fuel licensing fees is April 1, 2031.

Expenditures include the cost of cleanup, third party payments, loans to tank owners, financial assistance to homeowners to assist in the removal of heating oil USTs and replacement or upgrade of ASTs, and administrative expenses. Each uninsured cleanup undertaken in the state becomes eligible for fund assistance after the party responsible for the tank meets a certain “deductible,” a co-insurance payment based on the circumstances of ownership. For commercial entities, the deductible is set at \$10,000 per occurrence, although single-walled tank owners pay a higher deductible, and commercial heating oil USTs less than 1,100 gallons pay a \$250 deductible. For homeowners, a deductible of \$250 must be met. Owners of commercial heating oil ASTs meet a \$1,000 deductible.

Risks to Fund Solvency

Active Site Backlog. The most significant risk to the solvency of the PCF is the large number of contaminated properties that are eligible for reimbursement. These are comprised of motor fuel and heating oil USTs and ASTs, with motor fuel USTs posing the greatest financial risk as further described below. To date, the PCF has made disbursements at 3,103 properties. Attachment 2 and 3 provide a detailed list of properties that have received reimbursements from the PCF. Currently, there are 981 open PCF eligible cases of which 183 are spills and 798 are sites; most of the sites have contamination present crossing property boundaries. Spills are generally smaller and less complex releases that can be remediated and closed within one-two years, whereas sites are normally from larger and more complex releases that are costlier to cleanup and can take decades to reach closure. The most common open spill is from a residential AST release, and the most common open site is from a filling station motor fuel UST release. Of the 798 active PCF eligible sites, 619 are from motor fuel USTs with most of these releases discovered during the 1990s; see Figure 1 below.

The large backlog of sites in the 1990s is attributable to the U.S. EPA tank removal deadline. All commercial motor fuel single-walled steel tanks that lacked spill, overfill and corrosion protection needed to either be removed or upgraded by December 22, 1998. This was an important step in removing thousands of tanks in Vermont that were at high-risk of costly releases. The legacy from these unprotected tanks is that we still have an estimated motor fuel tank liability of nearly \$50M based on a

2016 actuarial study¹. Fortunately, we are continuing to make considerable progress with prevention. One illustration is to compare the number of motor fuel UST releases discovered in 1998 (the year of the U.S. EPA deadline) with the number of motor fuel UST releases discovered in 2019; this deadline is discussed further below. In 1998, a total of 163 motor fuel UST releases were discovered versus only eight discovered in 2019 with only three of these from active filling stations.

Despite progress, every year there are still numerous new PCF eligible releases. Many of these releases were preventable and the cleanup costs limit the resources that can be allocated to addressing the backlog. In fiscal year 2019, petroleum releases were discovered at another 104 PCF eligible properties. Of these, 59 releases were from ASTs (14 fewer than the prior year), and the other 45 releases were from USTs (eight fewer than the prior year).

Of the 59 AST releases, 57 were from heating fuel, one was from motor fuel, and one was from used motor oil. Of the 57 heating fuel AST releases (11 fewer than the prior year), 18 were from outdoor kerosene tanks and 39 were from indoor tanks. The reported causes for the 59 AST releases were as follows: 32 were from a leaking tank (generally from excessive rust and corrosion), 19 were from leaking fittings (most of these were from leaking fuel lines including one from an underground fuel line splice and another from a boiler explosion, several were from failures at the filter assembly), four were from tanks tipping over (one due to basement flooding, one due to an unstable foundation, and two due to rusted legs that collapsed), and three were from miscellaneous reasons. In one case, good driver training averted a much larger problem. The tank owner had disconnected their tank but left the fill pipe, and fortunately the driver immediately disconnected when no working vent alarm was noted. As a result, only four gallons of oil hit the basement floor rather than hundreds of gallons as has happened in other cases over the years.

Of the 45 UST releases, 42 were from heating oil tanks and three were from motor fuel tanks. Two of the motor fuel UST releases were from abandoned tanks and historic tank locations and one was from an older release discovered at an active filling station undergoing a property transaction.

The contamination of 104 additional properties will result in significant disbursements from the PCF. The costliest releases are from gasoline USTs. Though prevention efforts have significantly reduced new releases from gasoline USTs, many older such sites remain open that will require remediation and hence future PCF disbursements. These sites tend to be the most expensive sites to clean up in part due to the size and complexity of the release. The U.S. EPA Office of Underground Storage Tanks has made addressing the site backlog a priority and has set a stretch goal for states to increase annual cleanups by 25%. Of the 981 active cases where PCF eligible work needs to be completed, 619 were from leaking motor fuel USTs. In the past decade, the number of these sites has been reduced by 292 sites, as shown below in Figure 2. This figure also shows that we have closed over 1,500 motor fuel UST sites since program inception.

¹ Kerper and Bowron, LLC. (2016). *Vermont Petroleum Cleanup Fund Review of Liabilities and Loss Projections as of June 30, 2016*.

A 2016 actuarial study found that the average severity of PCF claims for motor fuel UST releases over the past decade was approximately \$70,000. This equates to approximately \$43M for addressing the remaining motor fuel UST backlog. This estimate may be low since sites on the backlog are some of our most complex and costly sites to cleanup.

Groundwater Protection Rule and Strategy. The revised Groundwater Protection Rule and Strategy become effective on July 6, 2019. This rule has the most bearing on our motor fuel UST backlog. Currently, there are at least 300 such sites that have groundwater contamination subject to this rule. New requirements include both reclassification of groundwater to non-potable at sites where contamination has migrated beyond the property boundary, and cleanup of those sites back to potable conditions. ANR is currently determining exactly how many sites are subject to this reclassification and cleanup requirement. Historically, ANR has prioritized cleanup based risk to human health and the environment, and contaminated groundwater beyond a property boundary was not in isolation a trigger for a cleanup. ANR is beginning to consider cost effective strategies for addressing these new cleanup requirements. ANR already conducted a Lean event to streamline the reclassification process.

Heating Oil Account and the Aging Residential AST Population. Historically, the heating oil account has been unsustainable since its creation on July 1, 2004. In order to keep it from running a deficit, several transfers have been needed from the motor fuel account. A total of \$3.35 million was transferred between fiscal year 2005 and fiscal year 2010. Things improved after raising the distributor licensing fee from a half cent per gallon of heating fuel to a full cent in 2010, though the account still periodically required the influx of additional monies. For example, a total of \$1.05 million was transferred from the General Fund in fiscal years 2011 and 2012 to help handle flood events. From fiscal year 2013 through 2017, the account ran a deficit in four of the five years and finally required a \$120,000 transfer from the motor fuel account at the end of fiscal year 2017. Given this situation, in fall 2015 the committee resolved that rather than raising additional revenue the best course of action was to strengthen prevention efforts, particularly for ASTs as many of the releases were preventable. Independently, Rep. Dan Conner approached the committee about legislation he was proposing for strengthening prevention

requirements in the AST Rules, which was supported and became Act 76 in the spring of 2016. The new AST Rules in response to Act 76 require tank inspections every three years and include a delivery prohibition to tanks at high risk of a fuel release. Details on this effort are included below under the section, “Investing in Prevention.”

Release dynamics have been closely followed during the initial three-year inspection phase-in period for all ASTs that ends August 15, 2020. Figure 3 shows AST cleanup expenditures by fiscal year irrespective of the release year, as well graph lines showing by fiscal year the number of new releases, the number of those releases that have resulted in claims to date, and the current number of open releases. Expenditures for most fiscal years are primarily comprised of cleanup costs related to releases from the current and past fiscal year as there is often a lag period between the release date and when cleanup occurs, and the claim is filed and processed. For example, for fiscal year 2016, 42% of all expenditures were for cleanup of releases that happened in prior years.

One positive trend to highlight is that the number of new releases each year is trending downwards as shown by the orange trend line in Figure 3 for new releases. This is a trend the committee believes should continue after the three-year inspection phase in. The other two lines in Figure 3 are more dynamic, as data for each year changes with time. The grey line showing the number of releases resulting in claims will continue to increase until plateauing about two years after the release year, i.e., the number of new claims for 2019 releases is expected to grow in 2020 and beyond. Conversely, the yellow line showing open releases will continue to decrease over time as spill sites are cleaned up and closed.

Figure 4 presents data in a very different way, showing cumulative expenditures related solely to the releases from that same fiscal year. One illustration of how to look at these two figures is looking at data for fiscal year 2015. From Figure 3, the graph shows that there were 54 new releases that resulted in claims (blue line) – a high for the past five years. Due to the lag in expenditures for those claims into the next fiscal year, it follows that fiscal year 2016 had the most expenditures in the past five years, but that is not readily apparent from just Figure 3. By looking at Figure 4, it becomes clearer that the spike in claims from releases in fiscal year 2015 did result in a commensurate spike in expenditures, i.e., the bar for FY15 on Figure 4 shows the highest level of expenditures since the FY12 bar, affected by Tropical Storm Irene.

Figure 4 highlights an important aspect to the vulnerability of the fund. In fiscal year 2012, Tropical Storm Irene alone caused more than 90 AST releases costing the PCF more than \$800,000 in cleanup expenses. The legislature provided \$750,000 in funds to help cover these costs. Without this additional income, the fund could not have absorbed these higher costs. As models predict an increased risk of another Irene type event in Vermont, one measure taken to address this risk was that the revised AST Rules require all new indoor ASTs in flood hazard areas to meet requirements to prevent tanks floating and spilling their contents during a flood. Similar steps are recommended but not required for outdoor tanks in flood prone areas.

Looking to the future, we anticipate a decrease in both cost and number of releases given our efforts at prevention through the residential and farm AST financial assistance program and the addition of the tank inspection requirements to the AST rules that went into effect Aug. 15, 2017. All ASTs are required to be inspected by August 15, 2020. Inspections are being phased in over this period of three years. As more and more tanks are upgraded to the current standards, fewer and fewer new tank releases should occur, allowing us to repay the motor fuel account for past transfers and help address the backlog of older motor fuel UST sites.

High Priority Sites. The PCF's most important priority is to protect human health and the environment from exposure to petroleum from tank releases. This was highlighted in 2012 at a Barre site where explosive gasoline vapors were discovered in the town's sewer system and in homes causing unhealthy exposure to the residents. In addition, hundreds of people were at risk of injury and death had there been an explosion in the sewer system. Immediate corrective action eliminated this significant risk to public health.

Of the more than 4,000 properties where petroleum contamination has been discovered, many of these have affected drinking water wells, contaminated indoor air of homes and businesses, have migrated into surface water bodies and have been found at dangerous levels in public utility lines. For example, more than 200 sites have been discovered where nearly 1,000 public or private drinking water wells have been contaminated. Attachment 4 provides a list of the number of sites discovered each year that have had a direct effect on a sensitive receptor. To address human health and environmental exposures to releases the fund has authorized proactive measures which include rapid initial response to releases, providing bottled water and point-of-entry drinking water treatment, aggressively recovering petroleum pollution, protecting surface water bodies, indoor air remediation and mitigation of dangerous petroleum vapors.

Sites that have a direct effect on public health and the environment are the program's most critical priority and demand the greatest level of effort. These same sites also present the greatest risk to fund solvency. Over the history of the program, the sites that have affected public water supplies or sensitive environmental areas have required extensive remediation at a high cost to the PCF. A site discovered in Killington had more than 80 private wells that were contaminated with the gasoline additive, MTBE. One home endured significant disruption to the use of its well, as the well was so contaminated that at one point it was used as a remediation well to clean up the aquifer. It is important to maintain a balance in the PCF, in excess of the required \$1 million federally mandated reserve, to ensure there are adequate funds to provide an immediate and effective response where public health is at risk.

Projected Liability Funding Gap. PCF Income and Expenses for both the motor fuel and heating oil accounts are tabulated in Attachment 6, which captures each calendar year from 1988 through 2015, and then transitions to fiscal year reporting in 2016. The table showing expenses highlights the shortfalls in the heating oil account from 2005 until the present, as years 2005 -2009 required a transfer of \$3,400,000 from the motor fuel account, another \$750,000 was legislatively transferred from the General Fund to help with Tropical Storm Irene, and another transfer from the motor fuel account was needed at the end of fiscal year 2017 to avoid a negative balance. This table also displays other transfers of funds, including those out of the fund by the legislature since the fund was established in 1989.

Actuarial studies completed in 2005 and 2016 each found that the fund was "*technically insolvent*" since "*projected liabilities exceeded assets of the fund*" through 2015 and 2026, respectively. A notable difference between these two studies is that the gap between projected assets and liabilities has significantly grown over time. The actuarial study in 2005 was completed only one year after the legislature enacted a fee on heating oil, so there was very limited data to help project how these new risks would play out. There is now an additional decade of data under this new funding and expenditure framework, which in part is why the PCF Advisory Committee requested ANR moving forward with a second actuarial study in 2016. Technical insolvency involves evaluating whether all outstanding claims can be met by assets and income. Given past data, we have a very good understanding of the average cost to clean up our various types of open sites, e.g., motor fuel UST, heating oil UST, heating AST, etc., so given our existing open site backlog the actuary can assess existing liabilities to the fund. In 2005, the actuary projected that PCF would have a \$10.5 million deficit on Dec. 31, 2005. By comparison, the

latest study projected a deficit of \$26.2 million on June 30, 2016. Legislative transfer of funds is an additional risk to fund solvency. In fiscal year 2009, \$2.8 million was transferred out of the PCF, expanding the gap between projected liabilities and fund assets. This transfer also resulted in some cleanups being delayed. Maintaining a healthy cash balance above the federally mandated \$1 million reserve is important to the long-term success of the fund and ensures that motor fuel tank owners can clean up a catastrophic release.

Review of Receipts to the Fund

A review of fund receipts for fiscal year 2019 is summarized in Attachment 1. In fiscal year 2019, total fund receipts for the motor fuel account were \$4,539,084. This represents a decrease in revenue of \$641,520 as compared to fiscal year 2018. The source of the difference was mostly due to a \$522,951 insurance cost recovery in the prior fiscal year. The distributor licensing fee, a one cent per gallon assessment of all motor fuels sold in the state, contributed \$3,840,659, a decrease of just \$2,344 from the prior year. Owners of “Category One” storage tanks paid \$158,225 in tank assessment fees, a decrease of \$23,600 over fiscal year 2018. Overall tank assessment revenue peaked in fiscal year 2015, when higher tank fees began being assessed on tank systems that are not fully double walled to incent their removal. This revenue is decreasing as tanks with higher assessment fees continue to be removed. Additionally, the overall number of tanks is beginning to trend downward. Repayment of motor fuel UST loan income totaled \$379,347, a decrease of \$156,491 from fiscal year 2018. Loan interest totaled \$16,609, a minor decrease from fiscal year 2018. The state successfully recovered funds totaling \$12,895, which was a significant drop from 2018 when one large insurance recovery totaled \$542,706. Interest paid on the PCF account was \$131,350, an increase of \$71,271 from the prior year.

In fiscal year 2019, total fund receipts for the heating fuel account were \$1,403,793, an increase of \$39,122 compared to fiscal year 2018. The Vermont Fuel Assistance Program also supports our prevention efforts and provided \$75,000 in fiscal year 2019 to supplement the PCF funded residential tank removal and replacement assistance program.

Review of Disbursements from the Fund

In fiscal year 2019, overall cleanup expenditures and assistance spending for heating oil tanks were up by \$1,409,080 and \$174,453 respectively, though spending on motor fuel UST loans sharply declined for a second consecutive year from the peak UST replacement demand in fiscal year 2017. A review of fund disbursements for fiscal year 2019 is summarized in Attachments 1, 2, and 3. Below, details are provided on disbursements from both the motor fuel and heating fuel accounts.

In fiscal year 2019, motor fuel account disbursements totaled \$3,959,443, an increase of \$617,413 from fiscal year 2018. Motor fuel expenditures were up as more sites shifted activities to cleanup now that the single-wall combination tank removal deadline had passed. Previously, cleanups of older sites were slowed as a precaution due to much higher anticipated impacts from the single-wall deadline. A more detailed breakout of expenditures from the motor fuel account included \$103,468 for the UST replacement loan program (a decrease of \$564,411 from fiscal year 2018), and \$3,590,778 for remedial action at UST motor fuel sites (an increase of \$1,309,333 from fiscal year 2018), which included both \$190,050 for 3rd party expenditures (a decrease of \$94,612 from fiscal year 2018) and \$174,900 for bulk storage remedial action (a decrease of \$20,610 from fiscal year 2018). The increase in overall cleanup spending is attributable to a renewed focus on non-time critical cleanups now that most of the financial risks and impacts from the single-wall motor fuel UST deadline have passed.

In fiscal year 2019, heating fuel disbursements totaled \$1,162,587, an increase of \$274,200 over fiscal year 2018. Heating fuel cleanup expenditure costs totaled \$713,660, an increase of \$99,746 from fiscal year 2018 that had experienced the lowest level of heating oil cleanup expenditures since the legislature expanded heating oil PCF coverage in 2004, which was primarily attributable to lower AST cleanup costs. Notably, AST cleanup costs were slightly lower in fiscal year 2019 than 2018, however the UST cleanup costs increased significantly. Heating fuel tank assistance expenditures totaled \$448,927, an increase of \$174,453 from the prior fiscal year; additional details may be found under the sections “Investing in Prevention” and “Effectiveness of the Fund in Meeting Its Purpose.” A more detailed breakout of expenditures from the heating fuel account included \$368,915 for remedial action for UST heating fuel sites (an increase of \$119,895 from fiscal year 2018), \$38,618 for the residential UST removal program (an increase of \$21,104 from fiscal year 2018), \$ 344,745 for remedial action for AST heating fuel sites (a decrease of \$20,149 from fiscal year 2018), and \$410,309 for the residential AST replacement grant program (an increase of \$153,349 from fiscal year 2018).

Third party claims continue to represent a small portion of overall disbursements (less than five percent historically). As of the end of fiscal year 2019 the PCF has paid \$7,143,165 for all third-party claims, with \$190,050 paid out in fiscal year 2019.

Since the inception of the PCF in 1988, the Fund has disbursed money across a total of 3,066 properties (Attachment 2 & 3), which includes sites where remediation occurred in prior years. Attachment 2 provides a detailed list of properties that have received reimbursements from the PCF for motor fuel tank releases. This primarily consists of retail filling stations, but also includes bulk storage facilities, farm and other non-retail commercial properties, residences and other locations. Attachment 3 provides a detailed list of properties that have received reimbursements from the PCF for heating fuel tank releases. This includes schools, homes, businesses, farms, churches, public works facilities and many other locations.

Figure 5 below provides a breakdown of the tank sources that comprise our PCF reimbursement sites. These sites are located throughout Vermont in 240 towns. Attachment 5 shows the distribution of these sites throughout the state.

In Figure 6 below, expenditures on contaminated sites in 2019 are broken out by task type. A total of 52 percent of expenditures were cleanup related, of which five percent was for emergency spill response, 43 percent for site corrective action, and four percent for contaminated soil management. Overall, expenditures for cleanup were 10 percent higher than last year. Ongoing monitoring costs comprised 26 percent of costs, which was an 11 percent decrease from last year. The other major expenditure type was “site investigation,” which accounted for 20 percent of expenditures. A total of two percent of expenditures were for bottled water and drinking water treatment. Overall, we are seeing a shift in expenditures from monitoring to investigation and cleanup.

Investing in Prevention Activities

Recent prevention efforts for motor fuel tanks have focused on the single-wall removal deadline, and for heating oil tanks have focused on the new AST Rules and their new inspection and red-tag requirements. Both prevention activities have had significant impacts and are each discussed below. Also discussed below are the non-residential UST loan program and the residential tank grant program that continue to assist hundreds of Vermonters every year with upgrading or replacing tanks. Collectively, these initiatives are instrumental in preventing releases that are costly to cleanup and can impact human health and the environment.

Single-Wall Motor Fuel UST Removal Deadline. All commercial single-wall motor fuel USTs lacking protection (corrosion, overfill and spill protection) were required to be removed in 1998. Most of these tanks were replaced with double-walled USTs. The remaining “protected” single-walled USTs were required to be permanently taken out-of-service or removed by Jan. 1, 2018, and any tanks taken out-of-service required removal within one year of having been taken out-of-service (by 12/31/18 at the latest).

A smaller number of these tanks were also lined. Due to lined tanks having an added level of protection, they do not require removal until Jan. 1, 2018, or within ten years of the date the tank was lined, whichever is later. The last tanks to be lined were in 2013, therefore we expect the last lined tanks to be closed by the end of 2023; this date could be extended since lined tanks may have their life extended by 5 years if they pass an inspection at the end of the ten years.

By Dec. 2017, there were 42 unlined single-wall UST systems that were either taken out-of-service (which included pumping out any product) or removed. As of Dec. 2019, there are still four out-of-service USTs at two facilities that still require removal from the ground. In the past six years, over 220 single-walled USTs were removed or taken out-of-service. Other than the small number of lined single-walled USTs with corrosion, overflow and spill protection, all active commercial motor fuel UST systems are now double-walled systems that have both leak detection and spill prevention safeguards. As of result of these additional safeguards, we have now reached the point where most newly discovered releases from motor fuel USTs are no longer from active filling stations. The majority are now from either smaller single-wall farm or residential tanks, or from historic releases at filling stations that closed decades ago prior the inception of ANR's tank program.

As discussed in detail in last year's report, up until recently these single-walled motor-fuel UST systems were still viewed as a significant risk to the solvency of the motor fuel account. This included a 2016 actuarial study that projected that the PCF balance would fall below the \$1 million minimum balance required for meeting financial assurance at filling stations by sometime in fiscal year 2018. In response to this risk, both legislative and administrative actions were taken. The legislature incited the removal of these tanks by raising tank assessment fees and subjecting releases to higher deductibles. The PCF Advisory Committee approved limitations on loan eligibility and ANR paused any new cleanups that were not critical for protecting human health and the environment. The approaches taken significantly helped to preserve a healthy fund balance, though other reasons also mollified the actual impact of the removal deadline. For example, the actual loan demand ended up being well below projections as many tank owners decided not to replace their tanks. In addition, when USTs were closed there were fewer than half of the new releases anticipated, and none were catastrophic in nature. As a result of the above, the fund balance increased during this period from an available fund balance of \$2.2 million at the end of fiscal year 2016 to \$4.5 million at the end of fiscal year 2019 (each value includes the \$1 million encumbrance). Given the current fund balance, we are now well positioned financially to ramp up cleanup work related to the backlog of 619 motor fuel UST sites, which is now required for many of these sites under the Groundwater Protection Rule and Strategy.

New AST Rules. The new AST Rules went into effect on August 15, 2017 and require inspections of all petroleum ASTs and a fuel delivery prohibition for non-compliant tanks using a physical and electronic "red tag." The Vermont Fuel Dealers Association has estimated that there are approximately 120,000 residential heating oil ASTs and many are aging tanks that are several decades old. As previously detailed under "*Risks to Fund Solvency,*" historically the heating fuel account has not been sustainable. Since, most cleanup costs are from preventable AST releases emanating from older tank systems that do not meet standards, it was determined that more action was needed to prevent releases rather than raise additional revenue. Act 76 was passed in fiscal year 2016, which led to new rules being promulgated on Aug. 15, 2017. Aside from the routine inspections and "red tagging" of non-compliant tanks (there are five reasons that an inspector would red-tag a tank that relate to high risk conditions for a release resulting in environmental/human health impact), the Rules also require inspector training and training certification. With the lack of sustainability in the heating fuel account, these new rules are critical to reducing the number and severity of annual AST spills. The new rules require that all tanks be inspected by Aug. 15, 2020, a three-year phase in period. As the remaining inventory of ASTs is

inspected for the first time, a great deal of additional repairs and replacements are anticipated. We are optimistic that the number and severity of AST releases will significantly be reduced after Aug. 2020 and we are already seeing evidence of fewer and less severe releases.

ANR created and maintains an online list of red-tagged tanks, which records tanks that should not receive deliveries due to high risk of a release. Inspectors are required to not only physically tag a non-compliant tank, but also utilize ANR’s online “red tag” form to add tanks to the red-tag list. Expanded usage of this red-tagged tank list began in fiscal year 2018 in response to routine inspections being required by the new rules. Since May 2018, ANR’s Tanks Program has been collaborating with ANR’s Environmental Compliance Division to follow-up on ASTs that were red tagged. This has included two phases of letters to assist tank owners come into compliance, and in select cases interaction with Environmental Enforcement Officers to compel return to compliance. Similar future efforts are planned. Below, Table 1 summarizes a program summary for both ANR’s red-tag list and return to compliance list.

Table 1. Summary of ANR Red Tag Data		
Tanks red-tagged since program started	2528	
Tanks brought into compliance	1737	
Tanks remaining on red-tag list	791	
Tanks red-tagged in 2018	443	
Tanks red-tagged in 2019	556	
Violations Listed on the Red Tag List

Total Tanks Returned to Compliance	805	1,737

There has also been a great deal of outreach and coordination to assist with the implementation of the new AST Rules. Direct communications with homeowners by fuel dealers and outreach to the media

including television interviews and public service announcements have been used to educate the public on the state's AST regulations. This outreach has occurred without taxpayer expense, thanks to the partnerships with businesses and non-profits such as VFDA, VPA and the VT Association of Realtors. These partnerships will continue to be used for outreach and education of new regulations. One important outreach in late fall 2017 and again in fall 2019 involved discouraging routine inspections during the heating season to minimize any heating emergencies. To that end, ANR collaborated with industry to develop a joint guidance sent out to all fuel dealers and inspectors via VFDA. In addition, ANR issued a press releases to provide general guidance on inspection timing, and where to get assistance on any required repairs or replacements.

Another effort involved ANR collaborating with the Department of Children and Families (DCF) Weatherization Program, including meeting with their community action partners and assisting with development of their internal guidance for administering DCF funds for responding to “heating emergency” situations that may result from red-tagged tanks during the winter. This guidance has also helped them in responding to AST related calls from their clientele. DCF has made additional monies available for other types of heating emergencies, e.g., heating appliance repairs. ANR also developed our own policies for responding to any heating emergencies, which included establishing criteria for waiving competitive bids to expedite necessary tank upgrades or replacements.

Grants and Loans. Though prevention efforts are still peaking due to the Aug. 2020 deadline for AST inspections, leak-prevention activities have been funded by the PCF for over a decade and have helped to mitigate risks and reduce future costs. These include providing financial assistance awards to farm and residential properties to remove and replace aging aboveground and underground heating oil tanks and providing interest free loans to upgrade underground storage tanks. AST Rules were first adopted in October 2011, which *recommended* routine inspection of old tanks. This initially increased demand for the AST replacement grant, and that demand spiked significantly beginning in fiscal year 2017 after passage of Act 76 *requiring* inspections and red-tagging non-compliant tanks. The AST requirements have also increased the cost of new tank installation. This includes installing a concrete pad for all tanks, and a roof for outside tanks that are not under the gable end of a building.

Financial assistance was implemented for removal of home heating oil USTs (in 1998) and replacement or upgrade of ASTs (in 2004) to encourage the repair or removal and replacement of non-compliant tanks before leaks and releases occur. The average cleanup cost for home heating USTs has been approximately \$15,000 and AST cleanup costs have averaged approximately \$11,000. The committee believes this assistance has been an excellent investment, as millions of dollars in cleanup costs have been avoided by removing or repairing tank systems before they leak.

Grants for Residential Heating Oil USTs (Removal). A total of fourteen assistance awards were approved in fiscal year 2019 for the closure of 14 residential heating oil USTs; the average disbursement was \$2,500. Of the 14 USTs removed, 12 were replaced by ASTs, one had an AST installed prior to the UST removal, and oil UST was replaced by a natural gas heating source. Total PCF reimbursement in FY19 for UST assistance was \$38,618, which brings the total amount awarded for USTs since the program began to \$1,222,980.

Grants for Residential Heating Fuel ASTs (Replacement or Upgrade). A total of 297 assistance awards were paid in fiscal year 2019 (78 more than last fiscal year) for the replacement or upgrade of residential heating fuel (kerosene or heating oil) ASTs using PCF monies. During the same period, ANR awarded 43 replacement awards using DCF assistance monies; this was 82 fewer replacements than the prior year when ANR was provided with more DCF funding.

Total PCF reimbursement in fiscal year 2019 for AST financial assistance was \$410,309, which brings the total amount awarded since the program began to \$3,405,786. PCF expenditures were above the statutory cap for reasons described below under “*Effectiveness of the Fund in Meeting Its Purpose.*” DCF provided ANR with additional funding of up to \$75,000 in fiscal year 2019 to fully cover AST replacements for tank owners who qualify for fuel assistance; a total of \$74,731.46 was spent.

Demand for assistance has spiked since AST inspection requirements became effective Aug. 15, 2017. Meeting that demand has been helped by the annual spending caps being legislatively increased from \$350,000 to \$400,000. *See* 2016 Act 66 §1, coupled with additional non-PCF assistance from DCF’s Heating Fuel Assistance program. In fiscal year 2020, ANR has again received a \$75,000 commitment from DCF though we are seeking to solicit additional funding. In fiscal year 2019 we were unable to fund 118 applicants who were asked to re-apply in fiscal year 2020. Demand has outstripped available funding since fiscal year 2017, so awards since that time have been prioritized by leaking tanks and those that are red tagged. In addition, at the start of fiscal year 2018 we lowered the annual household income eligibility cap from \$74,000 to \$65,000 and changed the award sliding scale to better assist a greater number of tank owners.

Beyond assistance monies that DCF provided to ANR, DCF’s Weatherization program also made significant contributions with AST repairs and replacements during the winter through their community action partners throughout the state. This work is done only on ASTs owned by heating assistance eligible tank owners in heating emergencies due to leaking or red-tagged tanks. Through their partners, the Weatherization program spent \$249,956 to replace 117 ASTs, and \$10,527 to repair/upgrade an additional 16 ASTs.

In addition to state assistance programs, more than 800 Vermonters have participated in the Vermont Fuel Tank Rebate Program since 2018, which is operated by the Vermont Fuel Dealers Association (VFDA) with safety grants from the National Oilheat Research Alliance (NORA).. The program distributed a rebate check of \$250 to those applicants that installed a new fuel oil tank and had it inspected by a Vermont certified tank inspector. In total, over \$200,000 has been distributed to qualified rebate applicants since March 15, 2018.

Total Grants for Residential Heating Fuel (USTs and ASTs). In total the PCF UST and AST financial assistance program has funded the removal, replacement and/or upgrade of 3,880 aging petroleum storage tanks; of this 3,166 ASTs have been replaced or upgraded with compliant tanks and 714 USTs have been removed. Figure 6 below depicts the annual fiscal year number of tanks removed and funds awarded from fiscal year 2008-2019.

Loans for Commercial Motor Fuel USTs (Removal or Replacement). In fiscal year 2019, disbursement for UST motor fuel loans totaled \$103,468; a decrease of \$564,411 from fiscal year 2018. This included \$3,000 for the agency to contract for services with a certified accountant to review tank owner’s financials for determination of ability to repay and suggested collateral for each loan. For each facility performing a tank replacement, the statutory cap for loans is \$150,000, whereas performing removals only are fully funded at an average of \$25,000 per facility. Though loan demand has decreased related to the single-wall combination tank deadline, we anticipate an increase in demand for routine required tank upgrade work moving forward as eligibility restrictions to meet the increased demand of the tank deadline have been lifted. As of November 26, 2019, there were 39 loans outstanding with a total balance of approximately \$2.5 million.

Loans for Non-Residential Heating Oil USTs (Replacement). The UST Program has received inquiries from owners of commercial buildings, churches and schools (public and private) who are seeking funding sources for the replacement of their large on-premises heating oil tanks. To date one school district (repaid), one private school (repaid), one town library, and two residences (repaid) have received interest-free loans. The outstanding loan balance for the library is \$4,710 following their last annual payment on December 26, 2019.

Effectiveness of the Fund in Meeting Its Purpose

The motor fuel account was effectively able to meet its purpose of funding cleanups and providing required financial assurance for permitted UST owners in Vermont in fiscal year 2019. Throughout the year there was an adequate balance in the motor fuel account. Spending safeguards for the single-wall motor fuel UST deadline have been lifted and additional non time critical cleanups have moved forward, and ANR plans is planning to more aggressively pursue cleanups on the motor fuel UST backlog once sites have been prioritized based on priorities dictated by the recently revised Groundwater Protection Rule and Strategy, as well as the Investigation and Remediation of Contaminated Properties Rule.

The heating oil account was able to meet its purpose of funding cleanups and providing financial assistance to low income tank owners for removal and replacement of tanks at increased risk of a release. The account ended the year with a balance of \$775,474. At the end of fiscal year 2017, the PCF Advisory Committee transferred \$120,000 from the motor fuel account to the heating oil account to help maintain a positive balance. This transfer was made with the requirement that the money be transferred back once the three-year AST inspection phase-in period is completed in August 2020. The annual statutory PCF tank assistance cap of \$400,000 was exceeded in fiscal year 2017 by \$79,808, and therefore in fiscal year 2018, ANR intentionally underspent to correct this. The intention was to spend a maximum of \$320,192 (a reduction of \$79,808), but the actual expenditures were \$274,474, a further reduction of \$45,718. This difference was due to approximately 20 applicants never having completed work and claiming their assistance awards. Given the increased demand for assistance spurred by the new inspection requirements, the extra \$45,718 was allocated to fiscal year 2019; ANR overshot the amount by \$3,209 and this will be deducted off the \$400,000 spending cap for fiscal year 2020. Given the increased high assistance demand, the fiscal year 2018 correction was only made possible by DCF's Fuel Assistance Program increasing its support of prevention efforts by boosting funding assistance from \$75,000 in fiscal year 2017 to \$262,000 in fiscal year 2018. DCF funding assistance returned to \$75,000 in fiscal year 2019, though ANR is currently negotiating with DCF for allocations exceeding \$75,000 in fiscal year 2020.

Reasonableness of the Cost of Cleanup

In past years, the committee has reviewed the written policies and procedures of the DEC related to UST replacement, eligible costs and reimbursement procedures. In assessing the reasonableness of the cost of cleanup, the committee has reviewed national averages and comparative data from other states. The PCF Advisory Committee has concluded that agency staff responsible for this program has exercised prudent cost containment measures. A review of the latest national survey (2018) of all tank fund managers conducted by Vermont in collaboration with the Association of State and Territorial Solid Waste Management Officials shows that Vermont's average cost of cleaning up contaminated sites is below almost all other states, including the lowest in New England. The continued efforts of Agency staff have helped to maintain reasonable cleanup costs in Vermont.

Total	48	184	214	263

For each site with an affected receptor the number of actual Vermonters exposed to contamination can vary. The actual users for public water supplies can be as low as 25 people per system to as high as many thousands of users. For sites with affected private water supplies, the number of contaminated wells depends on the specific conditions of the site. On average there are approximately three contaminated wells discovered per site, with an average of 3 users per household. However, one of the 182 sites listed above involved contamination to over 80 wells affecting approximately 240 users, and a site discovered in 2002 involves contamination to over 30 wells, including a public water supply, affecting hundreds of users. Surface water impacts can affect both public health and the environment. High concentrations of petroleum in a stream can cause detrimental affects to biota, and lead to an increased exposure to stream users. Lastly, sites with indoor air impacts can lead to the greatest risk to public health. Petroleum vapors entering a home can be at levels that are explosive. More often petroleum vapors reach levels that pose a serious health risk. Of the 263 sites with indoor air impacts, the number of exposed individuals varied from site to site. An average site involves three homes affected with approximately three persons per home.

¹ In 2018, we began adding all basement AST releases of at least 2 gallons. The value in parentheses are the number of releases that were 20 gallons or greater.
