Law Prohibits the Transport of Aquatic Plants and Aquatic Invasive Species in Vermont

Invasive species such as Eurasian watermilfoil and zebra mussels are typically spread by "hitchhiking" on boat trailers, propellers and fishing gear that isn't cleaned, or in bilge water, bait buckets, or livewells that aren't drained before moving to a different water body. It often takes only a tiny fragment of an invasive plant, sometimes less than an inch, to start a whole new infestation.

On July 1, 2010, Vermont's 22-year-old law prohibiting the transport of important aquatic invasive species changed. Previously, the law prohibited the transport of the invasive plants Eurasian watermilfoil and water chestnut. As of July 1, Vermont's invasive species transport law now **prohibits the transport of** *all* **aquatic plants or aquatic plant parts** on the outside of a vehicle boat, personal watercraft, trailer or other equipment.

The law defines an aquatic plant as " ...a plant that naturally grows in water, saturated soils or seasonally saturated soils, including algae and submerged, floating leafed, floating, or emergent plants."

The law change means both the public and those who enforce the law will not have to know how to distinguish one type of aquatic plant from another.

Vermont's invasive species transport law also will continue to prohibit the transport of two animal species, zebra mussels and quagga mussels.

The full law is available <u>here</u>.

A person who violates this law may be subject to a penalty of up to \$1,000 per violation (Vermont Statutes Annotated Title 23, Chapter 29 § 3317. Penalties).
