VERMONT DEPARTMENT OF ENVIRONMENTAL CONSERVATION
WATERSHED MANAGEMENT DIVISION
LAKES & PONDS PROGRAM

Individual Permit Application

For a Lake Encroachment Permit under

Chapter 11 of Title 29, § 401 *et seq.*

For Lake Encroachment Permitting Use Only Application Number: 2142-LP

Submission of this application constitutes notice that the person in Section B intends to encroach beyond the mean water level of a lake or pond, and certifies that the project will comply with Chapter 11 of Title 29, § 401 et seq. All information required on this form must be provided, and the requisite fees (Section I) must be submitted made payable to the State of Vermont, to be deemed complete.

A. Project Information

1. Physical Address (911 Address): various (see descriptive attachments)	
2a. Town- County: Wells & Poultney	2b. Zip: 05774
3. Span (School Parcel Account Number is required for your application to be deemed complete. It can be obtained from your property tax bill. If you cannot locate your property tax bill, please obtain this information from your Town Clerk) ☐	
4. Name of Lake/Pond: Lake Saint Catherine	
5. Have you ever applied for a permit with the Department of Environmental Conservation associated with this parcel? ☐ Yes ☑ No	

B. Applicant (Landowner if applicable) Contact Information

1. Name: Lake St Catherine Conservation Fund, Inc.		
2a. Mailing Address: PO Box 52		
2b. Town: Wells	2c. State: VT	2d. Zip: 05774
3. Phone: 802 645 9181	4. Email: wrsteinmetz@yahoo.com	

C. Application Preparer Contact Information:

1. Name: William R. Steinmetz		
2a. Mailing Address: 46 Chan Hopson Road		
2b. Town: Wells	2c. State: VT	2d. Zip: 05774
3. Phone: 802 645 9181	4. Email: lakemattersvs@aol.com	

D. Abutting Land Owners

Using the abutter addendum available on dec.vermont.gov., attach a list of land owners who abut the proposed project.

E. Project Description

1. Describe the proposed project including the description of the materials and mechanical equipment which may be used during construction and the anticipated work schedule. Identify whether or not the project includes placement or removal of fill and if so, specify the number of cubic yards of fill or dredged materials to be placed or removed beyond the shoreline at mean water level.

see attached text

2. Describe the purpose of the proposed project:

see attached

3. Describe what less intrusive feasible alternatives have been considered:

see attached

4. Describe the public benefits of the proposed project:

see attached

F. Encroachment Effects (describe how the proposed project will affect the following)

1. What measures are proposed to minimize the project's effects on water quality (e.g., use of a turbidity curtain)?

see attached

2. How will the project minimize effects to fish and wildlife habitat (e.g., project is not to commence until after fish spawning July 1 of any calendar year)?

see attached

3. Does the project propose removal of aquatic or shoreline vegetation? If so, what measures are proposed to reduce the effects of vegetation removal?

see attached

4. Describe the surrounding shoreline. Is the project consistent with these surroundings? What measures are proposed to ensure the project is in-keeping with the surroundings?

see attached

5. Will the project affect navigation, recreation, and other public uses? If so, how will these effects be minimized?

see attached

G. Applicant Certification

As APPLICANT, I hereby certify that the statements presented on this application are true and accurate and recognize that by signing this application, I agree to complete all aspects of the project as authorized. I understand that failure to comply with the foregoing may result in violation of the Chapter 11 of Title 29, § 401 et seq., and the Vermont Agency of Natural Resources may bring an enforcement action for violations of the Act pursuant to 10 V.S.A. chapter 201.

Applicant (landowner if applicable) Signature: W R Stenmetz Date: 7/13/16

I. Applicant Preparer Certification (if applicable)

As APPLICATION PREPARER, I hereby certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Application Preparer Signature: _____ Date: _____

J. Additional Required Documentation: (please check to ensure you have completed the following)

- [x] All sections of the application are complete or otherwise indicate "not applicable";
- [x] Application includes site plans with aerial and cross section views;
- [x] Application description includes dimensions and surface areas of cleared areas and impervious surfaces; and
- [x] Application includes photos of project area.

K. Permit Application Fees		
Select the most applicable permit description and requisite fee. If the proposed project involves more than one of the project types, multiple fees may apply. For example, a project involving structural erosion control and marina improvement will require both fees (2) and (3).		
1. Non-structural erosion control project (e.g., rip rap):		
Non-structural erosion control project: $155.00		
Total:		
2. Structural erosion control project		
Structural erosion control project: $250.00		
Total:		
3. Other Projects (e.g., marina improvements):		
Other Project: $300.00		300
Project Cost Fee: 0.01 times project cost	Total Project Cost: +20,000 x 0.01	200
Total:		~~$0.00~~ + 500

Submit this form and application fee, payable to:
State of Vermont
Vermont Department of Environmental Conservation
Watershed Management Division
1 National Life Dr, Main 2
Montpelier, VT 05620-3522

Aeration Permit, Draft Input for Permit Application — Additional Aeration Zones

Item E 1. This project will aerate five zones on Lake Saint Catherine that have degraded significantly in recent years through shallowing due to the build up of additional organic material and attendant plant congestion. The placement of the diffusers in these five areas is mapped in Attachment 1. The list of GPS coordinates is included as Attachment 2. (nb ... the coordinates on this attachment for the compressors are approximate and will be finalized once formal agreements are established with each land owner.) Included on our map is the proposed location for the on-shore compressor. The five proposed projects will extend the now documented success in the eastern zone of Little Lake of increasing the depth of the lake to soft bottom. By adding oxygen to the previously anaerobic level, decomposition of accumulated organic muck has been achieved. The reduction of plant congestion in the aeration zone and in particular Eurasian Water Milfoil is observed, but more documentation is needed to form final conclusions. LSCCF has expended over $70,000 for the eastern and western zone aeration projects together with over 1,500 hours of volunteer time in establishing, maintaining and monitoring the project. We are confident that we can continue this level of commitment for this new project and are hopeful for similar positive results in these additional zones. These zones are different from our existing aeration zones. It is these differences that make these new aeration zones valuable in accurately assessing the impacts of aeration in differing conditions. The Lakes and Ponds Program has labeled the aeration projects in Lake Saint Catherine an experiment. This determination argues for completing the experiment by testing aeration in these proposed zones with differing deterioration characteristics. After five seasons of treatment we should be able to assess the effectiveness of aeration in varied conditions.

Item E 2. The purpose of this project is to reduce organic sediment that is built-up in the five zones of the Lake. This buildup of organic settlement restricts accustomed recreational and transport activities. By adding oxygen to the soft bottom zone that is anaerobic, we have observed a gradual reduction of organic material in the eastern zone of Little Lake at the rate of one foot per season. We also observe changes in the plant population densities, notably with Eurasian Water Milfoil plants. We expect positive results in these proposed new five zones.

Item E 3. Organic material reduction by mechanical means is the only alternative identified today and is most appropriate for areas with higher levels of inorganic settlement as in the northwest corner of Little Lake. The hydraulic dredging approach may cost $5 per square foot versus $.05 to $.10 per square foot for aeration. The current depths to soft bottom range from 1 feet to 4 feet at the proposed diffuser locations in the various zones. The data for each diffuser location is included as Attachment 2.

Item E 4. Increased depth to the soft bottom will improve conditions for accustomed recreation and transport uses while also reducing the turbidity caused by boat props in shallow areas. It is anticipated that Increased depth in each zone will be at the rate of 1/2 foot per season. Public good will be attained through this projects.

Item F 1 - water quality. No negative water quality impacts have been observed during three seasons of aeration in the eastern zone of Little Lake and non-should occur in these five proposed zones. The proposed monitoring regime would be the same as our existing permits for aeration in Little Lake with depth to soft bottom as the one criteria.

Item F 2 fish and wildlife habitat. Fish and wildlife benefit from more normal levels of oxygenated water. Fishermen report improved fishing around the existing diffusers in the eastern zone. It should be noted that no fish kills have occurred on Little Lake since the aeration project began, unlike the major fish-kill that occurred six years ago (98 dead Northern Pike were counted on that occasion). No negative impacts on any wildlife are anticipated, nor have any been observed for the existing eastern zone project.

Item F 3 aquatic and shoreline vegetation. A better balance of aquatic vegetation has been achieved in much of the eastern zone of Little Lake. The air lines will enter the water at a location where no negative effects on vegetation will occur. The width of the intrusion into the water is 2 to 3 feet. Each air hose is 5 centimeters outside diameter and 1.2 cm inside diameter. A photograph of the proposed installation sites for the five compressors and the site that the various hoses would enter the water is provided as Attachment 3. Approximately 24 square feet of impervious area would be added at each of the five sites shown. These compressor locations are all temporary and as per the western zone installation should not require a shoreline protection permit..

Item F 4 consistency with natural surroundings. The compressors will be placed at the locations shown on the map on Attachment 1 and their GPS coordinates are listed on Attachment 2. Adequate sound reduction panels and an enclosure will be provided at each site. The resulting sound levels will be in the range of 50 to 60 DBA. No significant complaints regarding noise or any other negative impacts have been raised regarding our existing eastern zone project.

Item F 5. navigation, recreation and other public uses. All impacts are positive from our existing project and considerable public good has been achieved.

List of adjoining property owners for the five sites is included as Attachment 4.
