The first three digits identify the town; the next three digits identify the school district; and the last five digits represent the unique parcel or property.

D. Project Description

1. Describe the proposed project and on separate pages attach site plans, photos, calculations of impervious surface and cleared area, and any other relevant supporting documents:

This project consists of constructing a 3 stall garage and driveway on the western side of the private road on the property located at 1650 Camp Winape Road in the town of Morgan, Vermont. 74 feet of the proposed driveway will lie within the upland zone of the shoreland protection area. All other improvements will lie beyond 250 feet from the mean water level of Lake Seymour.

2. How far is existing cleared area or impervious surface from Mean Water Level 0 (feet), and how far will new cleared area or impervious surface be from MWL 176 (feet)?

See The Vermont Shoreland Protection Act – A Handbook for Shoreland Development, Appendix A – Estimating Mean Water Level

3. Can all new cleared area or impervious surface be set back at least 100 feet from MWL? Yes No
If no, explain why below (attach support information as needed):

- 4a. What is the slope of the project site area: 16 %
See The Vermont Shoreland Protection Act – A Handbook for Shoreland Development, Appendix B, Determining Slope

- 4b. Is the slope of the project area less than 20%?
 Yes No If yes, skip 4c.

- 4c. If no above (4b), describe the measures taken to ensure the slope is stable, resulting in minimal erosion and impacts to water quality (attach support information as needed):

- 5a. What is the surface area of new impervious surface associated with this project: 945 (square feet)
See The Vermont Shoreland Protection Act – A Handbook for Shoreland Development, Appendix F Calculating Percent Impervious Surface

- 5b. What is the total resulting impervious surface after completion of the project: 3,426 (square feet) and is that 20% or less of the parcel area within the PSA? Yes No If yes, skip 5c.

- 5c. If no above (5b), describe the best management practices used to manage, treat and control erosion from stormwater from the portion of impervious that exceeds 20% (attach support information as needed).
