D. Project Description

1. Describe the proposed project. For this application to be considered administratively complete you must attach site plans that denote existing and proposed cleared areas and impervious surface and their distances from mean water level, no fewer than three photos of the project area, and dimensions and associated surface areas of cleared areas and impervious surfaces.

The proposed project is located on a sloping 2.9 acre developed parcel along Lake Memphremagog in Newport Center, VT. The proposals consist of a new house and driveway, a renovation and expansion of the existing cottage, renovation of the existing shed (no expansion), 2 new decks and various new landscape features. Detailed layout and calculations are provided on the attached Landscape Master Plan. In the owners' interest to maintain good water quality and stability of the shoreline: 1. The proposed house is located on the gentlest portion of the parcel, avoiding slopes over 20%; 2. The existing and proposed impervious surface will be less than 20%, and 3. The resulting cleared area will be less than 40% because the existing lawns will be returned to no-mow meadows.

2. For developed parcels, how far is the existing habitable structure from Mean Water Level 35 (feet), and How far will new cleared area or impervious surface be from MWL 42 (feet)?

OR

For undeveloped parcels, how far will new cleared area or impervious surface be from MWL _____ (feet)?
See The Vermont Shoreland Protection Act – A Handbook for Shoreland Development, Appendix A – Estimating Mean Water Level

3. Can all new cleared area or impervious surface be set back at least 100 feet from MWL? Yes No
If no, explain why below (attach support information as needed):

The only proposed new impervious surface within 100' from MWL is the expansion of the existing cottage. The cottage is 35' from MWL and the expansion begins 42' from MWL (as stated in #2). The proposed new impervious surface resulting from the proposed new house is at least 130' from MWL.

- 4a. What is the slope of the project site area: 20.00 %

See The Vermont Shoreland Protection Act – A Handbook for Shoreland Development, Appendix B, Determining Slope

- 4b. Is the slope of the project area less than 20%?

Yes No If yes, skip 4c.

- 4c. If no above (4b), describe the measures taken to ensure the slope is stable, resulting in minimal erosion and impacts to water quality (attach support information as needed):

- 5a. What is the surface area of new impervious surface associated with this project: 12,551.00 (square feet)

See The Vermont Shoreland Protection Act – A Handbook for Shoreland Development, Appendix F Calculating Percent Impervious Surface

- 5b. What is the total resulting impervious surface after completion of the project and prior to implementation of best management practices: 18,162.00 (square feet)

For D5b, add A12 to D5a

- 5c. Is the total in 5b. 20% or less of the parcel area within the PSA? Yes If yes, skip 5d. No

If 5a is 0, check the n/a box, otherwise divide 5b by A11 and multiply by 100 for percentage. Total percentage = _____ % N/A

- 5d. If no above (5c), describe the best management practices used to manage, treat and control erosion from stormwater from the portion of impervious that exceeds 20% (attach support information as needed):
