EROSION PREVENTION AND SEDIMENTATION CONTROL NOTES:

The proposed project has a projected area of disturbance (i.e. new construction) of less than one acre. Under these conditions a state stormwater permit is not required for construction or for continuing operation of the site. In addition, if the site were assessed for the requirements of a State Stormwater Construction General Permit, the site would qualify as a "Low Risk" site. The Contractor should follow the standard practices of the Vermont DEC Low Risk Site Handbook for Erosion Prevention and Sediment Control during construction of the project and for establishment of permanent vegetation on the site thereafter. These practices will include the following:

- All Best Management Practices employed on this site must conform to the Vermont Low Risk Site Handbook for Erosion Prevention and Sediment Control.
- Use sediment control practices including silt fence if necessary to prevent discharge off site or to surface waters.
- All areas of disturbance must have temporary or final stabilization within 7 days of the initial disturbance. After this time, any disturbance in the area must be stabilized at the end of each work day. Stabilization shall include at a minimum mulching with hay/straw at a rate of 2 ton/acre (temporary). Final stabilization to commence within 48 hours of the completion of final grading and shall include seeding, fertilization and mulching with conservation mix or approved grass mixture.
- Stabilization is not required if work is to continue in the area within the next 24 hours and there is no precipitation forecast for the next 24 hours.
- New soil disturbance between October 15th and April 15th should be minimized. Any new soil disturbance within this time frame will require additional winter requirements and daily stabilization. Refer to Low Risk Site Handbook.
